Reporting Checklist for Nature Neuroscience

This checklist is used to ensure good reporting standards and to improve the reproducibility of published results. For more information, please read Reporting Life Sciences Research.

Please note that in the event of publication, it is mandatory that authors include all relevant methodological and statistical information in the manuscript.

Statistics reporting, by figure

- Please specify the following information for each panel reporting quantitative data, and where each item is reported (section, e.g. Results, & paragraph number).
- Each figure legend should ideally contain an exact sample size (n) for each experimental group/condition, where n is an exact number and not a range, a clear definition of how n is defined (for example x cells from x slices from x animals from x litters, collected over x days), a description of the statistical test used, the results of the tests, any descriptive statistics and clearly defined error bars if applicable.
- For any experiments using custom statistics, please indicate the test used and stats obtained for each experiment.
- Each figure legend should include a statement of how many times the experiment shown was replicated in the lab; the details of sample collection should be sufficiently clear so that the replicability of the experiment is obvious to the reader.
- For experiments reported in the text but not in the figures, please use the paragraph number instead of the figure number.

Note: Mean and standard deviation are not appropriate on small samples, and plotting independent data points is usually more informative. When technical replicates are reported, error and significance measures reflect the experimental variability and not the variability of the biological process; it is misleading not to state this clearly.

## Representative figures

1. Are any representative images shown (including Western blots and immunohistochemistry/staining) in the paper?
   
   If so, what figure(s)?

2. For each representative image, is there a clear statement of how many times this experiment was successfully repeated and a discussion of any limitations in repeatability?

   If so, where is this reported (section, paragraph #)?

### Statistics and general methods

1. **Is there a justification of the sample size?**
   - If so, how was it justified?
   - Where (section, paragraph #)?
   - Even if no sample size calculation was performed, authors should report why the sample size is adequate to measure their effect size.
   - **No statistical methods were used to pre-determine sample sizes but our sample sizes are similar to those generally employed in the field. Methods, para 14.**

2. **Are statistical tests justified as appropriate for every figure?**
   - Where (section, paragraph #)?
   - **Yes. Described in Methods, para 14.**
     - a. If there is a section summarizing the statistical methods in the methods, is the statistical test for each experiment clearly defined?
     - **Yes.**
     - b. Do the data meet the assumptions of the specific statistical test you chose (e.g. normality for a parametric test)?
     - Where is this described (section, paragraph #)?
     - **Yes. Described in the methods, para 14.**
     - c. Is there any estimate of variance within each group of data?
     - Is the variance similar between groups that are being statistically compared?
     - Where is this described (section, paragraph #)?
     - **Yes. Yes**
     - d. Are tests specified as one- or two-sided?
     - **No**
     - e. Are there adjustments for multiple comparisons?
     - **No**

3. **Are criteria for excluding data points reported?**
   - Was this criterion established prior to data collection?
   - Where is this described (section, paragraph #)?
   - **Only irregularly firing or silent cells for calculation of firing frequency in table 1. Described in Table 1 legend. No other data excluded.**

4. **Define the method of randomization used to assign subjects (or samples) to the experimental groups and to collect and process data.**
   - If no randomization was used, state so.
   - Where does this appear (section, paragraph #)?
   - **Since there was no a priori treatment of the animals, no procedures were used for blinding or randomization.. Methods, para 14.**

5. **Is a statement of the extent to which investigator knew the group allocation during the experiment and in assessing outcome included?**
   - If no blinding was done, state so.
   - Where (section, paragraph #)?
   - **Since there was no a priori treatment of the animals, no procedures were used for blinding or randomization.. Methods, para 14.**
6. For experiments in live vertebrates, is a statement of compliance with ethical guidelines/regulations included?  
   Where (section, paragraph #)?  
   Not applicable

7. Is the species of the animals used reported?  
   Where (section, paragraph #)?  
   Yes. abstract and Methods para 2.

8. Is the strain of the animals (including background strains of KO/transgenic animals used) reported?  
   Where (section, paragraph #)?  
   Yes. Methods para 2.

9. Is the sex of the animals/subjects used reported?  
   Where (section, paragraph #)?  
   No

10. Is the age of the animals/subjects reported?  
    Where (section, paragraph #)?  
    Yes. Methods para 2.

11. For animals housed in a vivarium, is the light/dark cycle reported?  
    Where (section, paragraph #)?  
    No, but it was the standard light-dark cycle

12. For animals housed in a vivarium, is the housing group (i.e. number of animals per cage) reported?  
    Where (section, paragraph #)?  
    No

13. For behavioral experiments, is the time of day reported (e.g. light or dark cycle)?  
    Where (section, paragraph #)?  
    NA

14. Is the previous history of the animals/subjects (e.g. prior drug administration, surgery, behavioral testing) reported?  
    Where (section, paragraph #)?  
    NA

   a. If multiple behavioral tests were conducted in the same group of animals, is this reported?  
      Where (section, paragraph #)?  
      NA

15. If any animals/subjects were excluded from analysis, is this reported?  
    Where (section, paragraph #)?  
    No animal excluded

   a. How were the criteria for exclusion defined?  
      Where is this described (section, paragraph #)?  
      NA
b. Specify reasons for any discrepancy between the number of animals at the beginning and end of the study.

Where is this described (section, paragraph #)?

NA

Reagents

1. Have antibodies been validated for use in the system under study (assay and species)?

   a. Is antibody catalog number given?

   Where does this appear (section, paragraph #)?

   yes. methods para 8

   b. Where were the validation data reported (citation, supplementary information, Antibodypedia)?

   Where does this appear (section, paragraph #)?

   Panatier et al., 2011, cited in the paper

2. If cell lines were used to reflect the properties of a particular tissue or disease state, is their source identified?

   Where (section, paragraph #)?

   NA

   a. Were they recently authenticated?

   Where is this information reported (section, paragraph #)?

   NA

Data deposition

Data deposition in a public repository is mandatory for:

a. Protein, DNA and RNA sequences
b. Macromolecular structures
c. Crystallographic data for small molecules
d. Microarray data

Deposition is strongly recommended for many other datasets for which structured public repositories exist; more details on our data policy are available here. We encourage the provision of other source data in supplementary information or in unstructured repositories such as Figshare and Dryad.

We encourage publication of Data Descriptors (see Scientific Data) to maximize data reuse.

1. Are accession codes for deposit dates provided?

   Where (section, paragraph #)?

   No deposited data
### Computer code/software

Any custom algorithm/software that is central to the methods must be supplied by the authors in a usable and readable form for readers at the time of publication. However, referees may ask for this information at any time during the review process.

1. Identify all custom software or scripts that were required to conduct the study and where in the procedures each was used.  
   - Not applicable

2. If computer code was used to generate results that are central to the paper’s conclusions, include a statement in the Methods section under "Code availability" to indicate whether and how the code can be accessed. Include version information as necessary and any restrictions on availability.  
   - Not applicable

### Human subjects

1. Which IRB approved the protocol?  
   - Where is this stated (section, paragraph #)?  
   - Not applicable

2. Is demographic information on all subjects provided?  
   - Where (section, paragraph #)?

3. Is the number of human subjects, their age and sex clearly defined?  
   - Where (section, paragraph #)?

4. Are the inclusion and exclusion criteria (if any) clearly specified?  
   - Where (section, paragraph #)?

5. How well were the groups matched?  
   - Where is this information described (section, paragraph #)?

6. Is a statement included confirming that informed consent was obtained from all subjects?  
   - Where (section, paragraph #)?

7. For publication of patient photos, is a statement included confirming that consent to publish was obtained?  
   - Where (section, paragraph #)?
### fMRI studies

For papers reporting functional imaging (fMRI) results please ensure that these minimal reporting guidelines are met and that all this information is clearly provided in the methods:

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Were any subjects scanned but then rejected for the analysis after the data was collected?</td>
<td>Not applicable</td>
</tr>
<tr>
<td>a. If yes, is the number rejected and reasons for rejection described?</td>
