Reporting Checklist for Nature Neuroscience

This checklist is used to ensure good reporting standards and to improve the reproducibility of published results. For more information, please read Reporting Life Sciences Research.

Please note that in the event of publication, it is mandatory that authors include all relevant methodological and statistical information in the manuscript.

Statistics reporting, by figure

- Please specify the following information for each panel reporting quantitative data, and where each item is reported (section, e.g. Results, & paragraph number).

- Each figure legend should ideally contain an exact sample size (n) for each experimental group/condition, where n is an exact number and not a range, a clear definition of how n is defined (for example x cells from x slices from x animals from x litters, collected over x days), a description of the statistical test used, the results of the tests, any descriptive statistics and clearly defined error bars if applicable.

- For any experiments using custom statistics, please indicate the test used and stats obtained for each experiment.

- Each figure legend should include a statement of how many times the experiment shown was replicated in the lab; the details of sample collection should be sufficiently clear so that the replicability of the experiment is obvious to the reader.

- For experiments reported in the text but not in the figures, please use the paragraph number instead of the figure number.

Note: Mean and standard deviation are not appropriate on small samples, and plotting independent data points is usually more informative. When technical replicates are reported, error and significance measures reflect the experimental variability and not the variability of the biological process; it is misleading not to state this clearly.

Representative figures

1. Are any representative images shown (including Western blots and immunohistochemistry/staining) in the paper?
   If so, what figure(s)?
   No

2. For each representative image, is there a clear statement of how many times this experiment was successfully repeated and a discussion of any limitations in repeatability?
   If so, where is this reported (section, paragraph #)?
   NA

Statistics and general methods

1. Is there a justification of the sample size?
   If so, how was it justified?
   Where (section, paragraph #)?
   Even if no sample size calculation was performed, authors should report why the sample size is adequate to measure their effect size.
   Yes.
   No sample size calculations were performed but the sample size numbers in this study are consistent with many recent human brain transcriptome studies, such as Nature 474, 380–384, Nature 508, 199–206, and Nature Neuroscience 18, 154–161. Online methods under the Human tissue and RNA processing section, last sentence.

2. Are statistical tests justified as appropriate for every figure?
   Where (section, paragraph #)?
   Yes, figure legends and online methods
   a. If there is a section summarizing the statistical methods in the methods, is the statistical test for each experiment clearly defined?
   Yes
   b. Do the data meet the assumptions of the specific statistical test you chose (e.g. normality for a parametric test)?
   Yes, online methods
   c. Is there any estimate of variance within each group of data?
   Is the variance similar between groups that are being statistically compared?
   Where is this described (section, paragraph #)?
   No
   d. Are tests specified as one- or two-sided?
   NA
   e. Are there adjustments for multiple comparisons?
   Yes, Bonferroni post-test

3. Are criteria for excluding data points reported?
   Was this criterion established prior to data collection?
   Where is this described (section, paragraph #)?
   NA
4. Define the method of randomization used to assign subjects (or samples) to the experimental groups and to collect and process data. If no randomization was used, state so. Where does this appear (section, paragraph #)?

| No randomization was used.  |
| Online methods under Bioinformatics analyses section, second sentence. |

5. Is a statement of the extent to which investigator knew the group allocation during the experiment and in assessing outcome included? If no blinding was done, state so. Where (section, paragraph #)?

| No blinding was done.  |
| Online methods under Bioinformatics analyses section, second sentence. |

6. For experiments in live vertebrates, is a statement of compliance with ethical guidelines/regulations included? Where (section, paragraph #)?

| NA |

7. Is the species of the animals used reported? Where (section, paragraph #)?

| NA |

8. Is the strain of the animals (including background strains of KO/transgenic animals used) reported? Where (section, paragraph #)?

| NA |

9. Is the sex of the animals/subjects used reported? Where (section, paragraph #)?

| Yes, supplementary table 1 |

10. Is the age of the animals/subjects reported? Where (section, paragraph #)?

| Yes, supplementary table 1 |

11. For animals housed in a vivarium, is the light/dark cycle reported? Where (section, paragraph #)?

| NA |

12. For animals housed in a vivarium, is the housing group (i.e. number of animals per cage) reported? Where (section, paragraph #)?

| NA |

13. For behavioral experiments, is the time of day reported (e.g. light or dark cycle)? Where (section, paragraph #)?

| NA |

14. Is the previous history of the animals/subjects (e.g. prior drug administration, surgery, behavioral testing) reported? Where (section, paragraph #)?

| NA |
a. If multiple behavioral tests were conducted in the same
group of animals, is this reported?
Where (section, paragraph #)?

15. If any animals/subjects were excluded from analysis, is this reported?
Where (section, paragraph #)?

   a. How were the criteria for exclusion defined?
   Where is this described (section, paragraph #)?

   b. Specify reasons for any discrepancy between the number of
   animals at the beginning and end of the study.
   Where is this described (section, paragraph #)?

Reagents

1. Have antibodies been validated for use in the system under study
   (assay and species)?
   NA

   a. Is antibody catalog number given?
   Where does this appear (section, paragraph #)?

   b. Where were the validation data reported (citation,
   supplementary information, Antibodypedia)?
   Where does this appear (section, paragraph #)?

2. If cell lines were used to reflect the properties of a particular tissue or
disease state, is their source identified?
Where (section, paragraph #)?

   a. Were they recently authenticated?
   Where is this information reported (section, paragraph #)?
Data deposition

Data deposition in a public repository is mandatory for:

- Protein, DNA and RNA sequences
- Macromolecular structures
- Crystallographic data for small molecules
- Microarray data

Deposition is strongly recommended for many other datasets for which structured public repositories exist; more details on our data policy are available [here](#). We encourage the provision of other source data in supplementary information or in unstructured repositories such as [Figshare](http://www.figshare.com) and [Dryad](http://www.dryad.org).

We encourage publication of Data Descriptors (see [Scientific Data](#)) to maximize data reuse.

1. Are accession codes for deposit dates provided?
   Where (section, paragraph #)?
   
   All RNAseq data for each individual RNA sample of cerebellum and frontal cortex tissues have been submitted to the NCBI Gene Expression Omnibus (http://www.ncbi.nlm.nih.gov/geo/) database under accession number GSE67196. The accession code number has been included in the online methods under the RNAseq library preparation and sequencing section, last sentence

Computer code/software

Any custom algorithm/software that is central to the methods must be supplied by the authors in a usable and readable form for readers at the time of publication. However, referees may ask for this information at any time during the review process.

1. Identify all custom software or scripts that were required to conduct the study and where in the procedures each was used.
   
   No custom software were used. All software used is open source and proper references are provided in the main text and online methods

2. If computer code was used to generate results that are central to the paper’s conclusions, include a statement in the Methods section under "Code availability" to indicate whether and how the code can be accessed. Include version information as necessary and any restrictions on availability.
   
   The URLs/references for the open source code are provided in the main text and online methods.

Human subjects

1. Which IRB approved the protocol?
   Where is this stated (section, paragraph #)?
   
   09-008148 and 12-007795
   Online Methods under Standard protocol approvals and patient consents, first sentence

2. Is demographic information on all subjects provided?
   Where (section, paragraph #)?
   
   No

3. Is the number of human subjects, their age and sex clearly defined?
   Where (section, paragraph #)?
   
   Yes, supplementary table 1
4. Are the inclusion and exclusion criteria (if any) clearly specified?  
   Where (section, paragraph #)?  
   Yes, online methods and supplementary table 1

5. How well were the groups matched?  
   Where is this information described (section, paragraph #)?  
   As described in first paragraph of the result section, c9ALS and sALS cases were matched for disease onset, disease duration and age at death, and to the best of our ability due to the availability of human samples with pure ALS diagnosis.

6. Is a statement included confirming that informed consent was obtained from all subjects?  
   Where (section, paragraph #)?  
   Yes, online methods under Standard protocol approvals and patient consents

7. For publication of patient photos, is a statement included confirming that consent to publish was obtained?  
   Where (section, paragraph #)?  
   NA

fMRI studies

For papers reporting functional imaging (fMRI) results please ensure that these minimal reporting guidelines are met and that all this information is clearly provided in the methods:

1. Were any subjects scanned but then rejected for the analysis after the data was collected?  
   NA

2. Is the number of blocks, trials or experimental units per session and/or subjects specified?  
   Where (section, paragraph #)?  
   NA

3. Is the length of each trial and interval between trials specified?  
   NA

4. Is a blocked, event-related, or mixed design being used? If applicable, please specify the block length or how the event-related or mixed design was optimized.  
   NA

5. Is the task design clearly described?  
   Where (section, paragraph #)?  
   NA

6. How was behavioral performance measured?  
   NA

7. Is an ANOVA or factorial design being used?  
   NA

8. For data acquisition, is a whole brain scan used? If not, state area of acquisition.  
   NA
1. How was this region determined?

9. Is the field strength (in Tesla) of the MRI system stated?
   a. Is the pulse sequence type (gradient/spin echo, EPI/spiral) stated?
   b. Are the field-of-view, matrix size, slice thickness, and TE/TR/flip angle clearly stated?

10. Are the software and specific parameters (model/functions, smoothing kernel size if applicable, etc.) used for data processing and pre-processing clearly stated?

11. Is the coordinate space for the anatomical/functional imaging data clearly defined as subject/native space or standardized stereotaxic space, e.g., original Talairach, MNI305, ICBM152, etc? Where (section, paragraph #)?

12. If there was data normalization/standardization to a specific space template, are the type of transformation (linear vs. nonlinear) used and image types being transformed clearly described? Where (section, paragraph #)?

13. How were anatomical locations determined, e.g., via an automated labeling algorithm (AAL), standardized coordinate database (Talairach daemon), probabilistic atlases, etc.?

14. Were any additional regressors (behavioral covariates, motion etc) used?

15. Is the contrast construction clearly defined?

16. Is a mixed/random effects or fixed inference used?
   a. If fixed effects inference used, is this justified?

17. Were repeated measures used (multiple measurements per subject)?
   a. If so, are the method to account for within subject correlation and the assumptions made about variance clearly stated?

18. If the threshold used for inference and visualization in figures varies, is this clearly stated?

19. Are statistical inferences corrected for multiple comparisons?
   a. If not, is this labeled as uncorrected?
20. Are the results based on an ROI (region of interest) analysis? NA
   a. If so, is the rationale clearly described?
   b. How were the ROI’s defined (functional vs anatomical localization)?

21. Is there correction for multiple comparisons within each voxel? NA

22. For cluster-wise significance, is the cluster-defining threshold and the corrected significance level defined? NA
