Reporting Checklist for Nature Neuroscience

This checklist is used to ensure good reporting standards and to improve the reproducibility of published results. For more information, please read Reporting Life Sciences Research.

Please note that in the event of publication, it is mandatory that authors include all relevant methodological and statistical information in the manuscript.

Statistics reporting, by figure

- Please specify the following information for each panel reporting quantitative data, and where each item is reported (section, e.g. Results, & paragraph number).
- Each figure legend should ideally contain an exact sample size (n) for each experimental group/condition, where n is an exact number and not a range, a clear definition of how n is defined (for example x cells from x slices from x animals from x litters, collected over x days), a description of the statistical test used, the results of the tests, any descriptive statistics and clearly defined error bars if applicable.
- For any experiments using custom statistics, please indicate the test used and stats obtained for each experiment.
- Each figure legend should include a statement of how many times the experiment shown was replicated in the lab; the details of sample collection should be sufficiently clear so that the replicability of the experiment is obvious to the reader.
- For experiments reported in the text but not in the figures, please use the paragraph number instead of the figure number.

Note: Mean and standard deviation are not appropriate on small samples, and plotting independent data points is usually more informative. When technical replicates are reported, error and significance measures reflect the experimental variability and not the variability of the biological process; it is misleading not to state this clearly.

### Representative figures

1. Are any representative images shown (including Western blots and immunohistochemistry/staining) in the paper?

   If so, what figure(s)?

2. For each representative image, is there a clear statement of how many times this experiment was successfully repeated and a discussion of any limitations in repeatability?

   If so, where is this reported (section, paragraph #)?

---

Sample traces from electrophysiology recordings: Figures 2a and 2c.
Representative X-gal staining: Figures 3b and 3c.

The sample traces presented in figure 2a and 2c are representative of the recordings, the number of cells recorded from is defined in the legend of Figure 2.
The images presented in Figures 3b and 3c are representative of the twelve animals in each group as reported in Methods, paragraph 4.
Statistics and general methods

1. Is there a justification of the sample size?
   If so, how was it justified?
   Where (section, paragraph #)?
   Even if no sample size calculation was performed, authors should report why the sample size is adequate to measure their effect size.
   The sample sizes were based on previous power analyses and our extensive experience in conducting the behavioural studies reported in the manuscript. Power calculations on previously reported collected in our laboratory suggest that to achieve a power of 0.8, a group size of eight is required. Larger sample sizes were used to allow for maintenance of power should animals be excluded due cannulae misplacement or blockage. This information is provided in the Methods paragraph 1.

2. Are statistical tests justified as appropriate for every figure?
   Where (section, paragraph #)?
   a. If there is a section summarizing the statistical methods in the methods, is the statistical test for each experiment clearly defined?
   Methods - Statistical analysis section
   b. Do the data meet the assumptions of the specific statistical test you chose (e.g. normality for a parametric test)?
   Where is this described (section, paragraph #)?
   Based on previous literature we assumed the data were normally distributed and conducted ANOVA, and t-tests.
   Methods Statistical analysis paragraph 2
   c. Is there any estimate of variance within each group of data?
   Is the variance similar between groups that are being statistically compared?
   Where is this described (section, paragraph #)?
   Yes, standard error of the mean.
   Yes, variance is similar between the groups
   The mean +SEM are referred to in each figure legend
   d. Are tests specified as one- or two-sided?
   Yes in the methods paragraph 18
   e. Are there adjustments for multiple comparisons?
   Bonferroni corrections were made to adjust for multiple comparisons (see Methods-Statistical analysis paragraph 2)
   All data presented as dot-plots

3. To promote transparency, Nature Neuroscience has stopped allowing bar graphs to report statistics in the papers it publishes. If you have bar graphs in your paper, please make sure to switch them to dot-plots (with central and dispersion statistics displayed) or to box-and-whisker plots to show data distributions.
   All data presented as dot-plots

4. Are criteria for excluding data points reported?
   Was this criterion established prior to data collection?
   Where is this described (section, paragraph #)?
   No data points were excluded
5. Define the method of randomization used to assign subjects (or samples) to the experimental groups and to collect and process data. If no randomization was used, state so. Where does this appear (section, paragraph #)?

Animals were randomly assigned to the groups either before surgery (described in the Subjects section paragraph 1) or by the person doing the drug infusions. A within subjects design was used, thus each animal served as its own control. Methods-Experimental design section paragraph 1

6. Is a statement of the extent to which investigator knew the group allocation during the experiment and in assessing outcome included? If no blinding was done, state so. Where (section, paragraph #)?

The experimenter was blind to the infusion status of each animal. A statement of this is in the Methods-Assessment of exploration in behavioural tasks, paragraph 1

7. For experiments in live vertebrates, is a statement of compliance with ethical guidelines/regulations included? Where (section, paragraph #)?

All animal procedures were performed in accordance with United Kingdom Animals Scientific Procedures Act (1986) and associated guidelines. In Methods - Subjects paragraph 1

8. Is the species of the animals used reported? Where (section, paragraph #)?

In Methods - Subjects paragraph 1

9. Is the strain of the animals (including background strains of KO/transgenic animals used) reported? Where (section, paragraph #)?

In Methods - Subjects paragraph 1

10. Is the sex of the animals/subjects used reported? Where (section, paragraph #)?

In Methods- Subjects paragraph 1

11. Is the age of the animals/subjects reported? Where (section, paragraph #)?

Adult male rats 300-350g were used as stated In Methods- Subjects paragraph 1

12. For animals housed in a vivarium, is the light/dark cycle reported? Where (section, paragraph #)?

In Methods - Subjects paragraph 1

13. For animals housed in a vivarium, is the housing group (i.e. number of animals per cage) reported? Where (section, paragraph #)?

In Methods- Subjects paragraph 1

14. For behavioral experiments, is the time of day reported (e.g. light or dark cycle)? Where (section, paragraph #)?

In Methods Subjects paragraph 1

15. Is the previous history of the animals/subjects (e.g. prior drug administration, surgery, behavioral testing) reported? Where (section, paragraph #)?

In Methods-Subjects paragraph 1
16. If any animals/subjects were excluded from analysis, is this reported?
   Where (section, paragraph #)?

   a. How were the criteria for exclusion defined?
      Where is this described (section, paragraph #)?

   b. Specify reasons for any discrepancy between the number of animals at the beginning and end of the study.
      Where is this described (section, paragraph #)?

   One animal from the dCA1-mPFC group was not complete the object recognition test as the infusion cannulae was blocked. 
   Methods, Statistical analysis section paragraph 2.

   The animal was excluded from behavioural testing due to blockade of the chronically implanted cannulae, as described in the Methods Statistical analysis section paragraph 2.

   One animal did not complete the behavioural testing as described in section 15a. 
   Described in the Methods section Statistical analysis section paragraph 2

Reagents

1. Have antibodies been validated for use in the system under study (assay and species)?

   a. Is antibody catalog number given?
      Where does this appear (section, paragraph #)?

   b. Where were the validation data reported (citation, supplementary information, Antibodypedia)?
      Where does this appear (section, paragraph #)?

   N/A

2. Cell line identity

   a. Are any cell lines used in this paper listed in the database of commonly misidentified cell lines maintained by ICLAC and NCBI Biosample?
      Where (section, paragraph #)?

   b. If yes, include in the Methods section a scientific justification of their use--indicate here in which section and paragraph the justification can be found.

   c. For each cell line, include in the Methods section a statement that specifies:
      - the source of the cell lines
      - have the cell lines been authenticated? If so, by which method?
      - have the cell lines been tested for mycoplasma contamination?
      Where (section, paragraph #)?

   N/A
Data availability

Provide a Data availability statement in the Methods section under "Data availability", which should include, where applicable:

- Accession codes for deposited data
- Other unique identifiers (such as DOIs and hyperlinks for any other datasets)
- At a minimum, a statement confirming that all relevant data are available from the authors
- Formal citations of datasets that are assigned DOIs
- A statement regarding data available in the manuscript as source data
- A statement regarding data available with restrictions

See our data availability and data citations policy page for more information.

Data deposition in a public repository is mandatory for:

a. Protein, DNA and RNA sequences
b. Macromolecular structures
c. Crystallographic data for small molecules
d. Microarray data

Deposition is strongly recommended for many other datasets for which structured public repositories exist; more details on our data policy are available [here](#). We encourage the provision of other source data in supplementary information or in unstructured repositories such as Figshare and Dryad.

We encourage publication of Data Descriptors (see Scientific Data) to maximize data reuse.

Where is the Data Availability statement provided (section, paragraph #)?

- Data availability statement included at the end of the Methods section

Computer code/software

Any custom algorithm/software that is central to the methods must be supplied by the authors in a usable and readable form for readers at the time of publication. However, referees may ask for this information at any time during the review process.

1. Identify all custom software or scripts that were required to conduct the study and where in the procedures each was used.

   Custom Matlab scripts were used to analyse in-vitro electrophysiology recordings.

2. If computer code was used to generate results that are central to the paper’s conclusions, include a statement in the Methods section under "Code availability" to indicate whether and how the code can be accessed. Include version information as necessary and any restrictions on availability.

   Code availability statement included in Methods, paragraph 22

Human subjects
1. Which IRB approved the protocol?
   Where is this stated (section, paragraph #)?

2. Is demographic information on all subjects provided?
   Where (section, paragraph #)?

3. Is the number of human subjects, their age and sex clearly defined?
   Where (section, paragraph #)?

4. Are the inclusion and exclusion criteria (if any) clearly specified?
   Where (section, paragraph #)?

5. How well were the groups matched?
   Where is this information described (section, paragraph #)?

6. Is a statement included confirming that informed consent was obtained from all subjects?
   Where (section, paragraph #)?

7. For publication of patient photos, is a statement included confirming that consent to publish was obtained?
   Where (section, paragraph #)?

fMRI studies

For papers reporting functional imaging (fMRI) results please ensure that these minimal reporting guidelines are met and that all this information is clearly provided in the methods:

1. Were any subjects scanned but then rejected for the analysis after the data was collected?
   a. If yes, is the number rejected and reasons for rejection described?
      Where (section, paragraph #)?

2. Is the number of blocks, trials or experimental units per session and/or subjects specified?
   Where (section, paragraph #)?

3. Is the length of each trial and interval between trials specified?

4. Is a blocked, event-related, or mixed design being used? If applicable, please specify the block length or how the event-related or mixed design was optimized.
5. Is the task design clearly described?
   Where (section, paragraph #)?
   N/A

6. How was behavioral performance measured?
   N/A

7. Is an ANOVA or factorial design being used?
   N/A

8. For data acquisition, is a whole brain scan used?
   If not, state area of acquisition.
   N/A
   a. How was this region determined?
   N/A

9. Is the field strength (in Tesla) of the MRI system stated?
   N/A
   a. Is the pulse sequence type (gradient/spin echo, EPI/spiral) stated?
   N/A
   b. Are the field-of-view, matrix size, slice thickness, and TE/TR/flip angle clearly stated?
   N/A

10. Are the software and specific parameters (model/functions, smoothing kernel size if applicable, etc.) used for data processing and pre-processing clearly stated?
    N/A

11. Is the coordinate space for the anatomical/functional imaging data clearly defined as subject/native space or standardized stereotaxic space, e.g., original Talairach, MNI305, ICBM152, etc? Where (section, paragraph #)?
    N/A

12. If there was data normalization/standardization to a specific space template, are the type of transformation (linear vs. nonlinear) used and image types being transformed clearly described? Where (section, paragraph #)?
    N/A

13. How were anatomical locations determined, e.g., via an automated labeling algorithm (AAL), standardized coordinate database (Talairach daemon), probabilistic atlases, etc.?
    N/A

14. Were any additional regressors (behavioral covariates, motion etc) used?
    N/A

15. Is the contrast construction clearly defined?
    N/A

16. Is a mixed/random effects or fixed inference used?
    N/A
    a. If fixed effects inference used, is this justified?
    N/A

17. Were repeated measures used (multiple measurements per subject)?
    N/A
a. If so, are the method to account for within subject correlation and the assumptions made about variance clearly stated? N/A

18. If the threshold used for inference and visualization in figures varies, is this clearly stated? N/A

19. Are statistical inferences corrected for multiple comparisons? N/A
   a. If not, is this labeled as uncorrected? N/A

20. Are the results based on an ROI (region of interest) analysis? N/A
   a. If so, is the rationale clearly described? N/A
   b. How were the ROI’s defined (functional vs anatomical localization)? N/A

21. Is there correction for multiple comparisons within each voxel? N/A

22. For cluster-wise significance, is the cluster-defining threshold and the corrected significance level defined? N/A
