Figure B: Results from the time-series correlation analysis at a threshold of p<0.01, masked by the results of the subtraction analysis at p<0.005. (a) A region of orbitofrontal cortex showing a correlation with an increasing magnitude of reward masked by the results of the RewAcq-PunRev contrast (at p<0.005). (b) A region of orbitofrontal cortex showing a correlation with an increasing magnitude of punishment masked by the results of the PunRev-RewAcq contrast (at p<0.005). The purpose of this figure is to show the overlap between the time-series correlation analysis and the subtraction analysis described in the paper.
