Supplementary Figure 3: Inactivation properties of Ca\textsubscript{v}1.4\textsubscript{∆C122}

Dependence of inactivation of $I_{Ca}$ and $I_{Ba}$ through Ca\textsubscript{v}1.4\textsubscript{∆C122} with and without co-expressed GFP-C\textsubscript{122}. $r_{50}$ corresponds to the fraction of current remaining after 50 ms; $f$ is the difference between $r_{50}$ values at -10 mV. All error bars reflect s. e.. Number of experiments are given in parentheses.
