Supplementary Figure 1 | Plasma membrane targeting of CD8-Rluc fusion protein. HEK293T cells were co-transfected with CD8-Rluc or β2AR-Rluc along with HA-GBR2 (used as a plasma membrane indicator). Localization of CD8-Rluc or β2AR-Rluc and HA-GBR2 was assessed by confocal immunofluorescence microscopy and analysed as described in Methods. (Red staining = CD8-Rluc or β2AR-Rluc; Green staining = HA-GBR2; Yellow staining = co-localization of CD8-Rluc or β2AR-Rluc and HA-GBR2 at the plasma membrane).
