Supplementary Figure 6 | Basal BRET signal between β₂AR-Rluc and GFP10-Gγ₂ is sensitive to a β₂AR-inverse agonist. Membrane preparations were obtained from HEK293T cells transfected with β₂AR-Rluc and GFP10-Gγ₂, and stimulated or not (NT) with 10 µM ISO or ICI. Data represent the mean ± s.e.m. of three different experiments, each performed in duplicate.
