Supplementary Fig. 2
Scatter plots demonstrating the number of genes and average LogRatio (of 2 biological replicates) of gene modulation greater than 2-fold in lipid-transfected and electroporated samples with mock-treated as reference.

a, b, c - Cyclo 1, MEK1-2 and MEK1-4 delivered by lipofection; d, e, f - Cyclo 1, MEK1-2 and MEK1-4 delivered by electroporation. Black filled circles indicate the targeted gene.
