Supplementary Figure 2

The influence of the peptide to resin ratio on the selectivity and percentage of singly phosphorylated peptides in the case of pTiO$_2$.

The influence of the peptide to resin ratio on the selectivity is shown in supplementary figure 2a. The influence of the peptide to resin ratio on the percentage of singly phosphorylated peptides is shown in supplementary figure 2b. The blue line in Supplementary Figure 2a shows the number of identified phosphorylation sites, the yellow line the number of identified non-phosphorylated peptides. In Supplementary Figure 2b the red line shows the percentage of singly phosphorylated peptides identified.
