

War. Under Sir Edward Appleton's able guidance, Britain has established a lead in the scientific applications of radio, which the country will look to the new Radio Research Establishment to improve. With the present team under Dr. Smith-Rose, and with Sir Edward at the head of the Department, they are not likely to be disappointed.

Deputy Scientific Adviser to Army Council: Prof. F. J. M. Stratton, O.B.E., F.R.S.

THE appointment of Prof. F. J. M. Stratton to the post of deputy scientific adviser to the Army Council has been announced. Prof. Stratton's retirement from the chair of astrophysics at Cambridge last October was announced in *Nature* (159, 463; 1947), and the record of his scientific work was noted. His was a retirement dictated by the rules of superannuation, and not by any loss of activity; so that his choice for and acceptance of this further post will be no more a surprise to his friends than his own preference for further service to merited retirement. The War Office is fortunate in securing the services of so able a man of science, particularly one who has given proof, through ten years service in the Army in two wars and a long association with the Cambridge O.T.C. and the Territorial Army, of his aptitude and interest in military affairs. While his appointment will be a temporary one for a limited period, the acquisition to the Scientific Civil Service, even for a short time, of such men as Prof. Stratton will be a source of strength to the Service, and the experience and leadership he can give to some of the younger men of science employed by the Army, in operational research and other tasks, will obviously be of the greatest value to them.

Willard Gibbs Medal: Prof. Carl F. Cori

PROF. CARL F. CORI, professor of biochemistry in the Washington University School of Medicine, has been awarded the 1948 Willard Gibbs Medal of the Chicago Section of the American Chemical Society. This medal, one of America's highest scientific honours, goes to Dr. Cori for his achievements in research on the processes by which the body converts sugar into energy. He has been a leading worker in the difficult field of biological carbohydrate transformations for many years. His contributions have been of widespread importance involving adrenal, cortical, pituitary, and pancreatic roles in carbohydrate utilization as well as carbohydrate metabolism in tumours. A recent outstanding contribution is at least a partial solution of the problem of how insulin functions. He and his wife, Dr. Gerty T. Cori, who is also a professor of biochemistry in Washington University, received the Nobel Prize for Medicine for 1947 (see *Nature*, 160, 599; 1947) for determining the process by which the body stores sugar in the liver as glycogen, or animal starch, and then reconverts the glycogen to sugar as it is needed.

Library of the Royal Society: Mr. H. W. Robinson

ON March 31 Mr. H. W. Robinson retires from the office of librarian of the Royal Society. He joined the staff of the Society in 1902, when as a boy of fourteen he assisted both the chief clerk and the librarian. His work soon became exclusively associated with the Society's Library; in 1930 he was raised from assistant to the post of assistant librarian and five years later to the position which

he now holds. This forty-six years service to the Society has been twice broken by war. In the First World War Mr. Robinson served in the army with distinction; in the Second World War there was a period of service on the Central Register, which came between the strenuous work which he performed in seeing the Society's manuscripts and early printed books safely to Wales and his recall to the Society's service in 1943. Since then he has had the exacting but pleasant task of seeing the Library's books brought back from Oxford, where they had been stored by the Bodleian Library, and arranged in their places with a minimum of inconvenience and disturbance.

Mr. Robinson has a unique knowledge of the Society's Library and in particular of its extensive and priceless archives, a knowledge which he has always been delighted to put at the disposal of the scholars, from many countries, to whom his learning is well known. His intimate acquaintance with the Society's traditions and records has found expression in his services to the history of science. He is, for example, an authority on Robert Hooke, having edited, in conjunction with Mr. Walter Adams, the Diary in the possession of the Guildhall Library and having identified as another Diary of Robert Hooke the manuscript in the British Museum previously attributed to James Petiver. With Prof. Harcourt Brown and Dr. D. McKie he founded the *Annals of Science*, and he was actively associated with the foundation of the British Society for the History of Science, of which he is honorary treasurer. He has an intimate knowledge of many aspects of the bibliography of Isaac Newton, in particular of his manuscripts, and it has been arranged that after his retirement his services shall still be available to the Society, to assist Prof. H. W. Turnbull in editing the Newton letters. It is to be hoped that for many years to come Mr. Robinson's familiar figure will be seen about the Royal Society Library, working among the manuscripts that he loves so well.

Reports on German War-time Industry and Science

REPORTS of war-time scientific and industrial activities in Germany have been available to interested parties for some time. These reports were prepared by B.I.O.S. (British Intelligence Objectives Sub-Committee), its American counterpart, F.I.A.T. (Field Information Agency, Technical), and the combined Anglo-American Agency, C.I.O.S. (Combined Intelligence Objectives Sub-Committee) which preceded them. Actual investigations in Germany ceased at the end of June 1947. To date, 2,720 reports have been issued. It is stated that more than one million copies have been sold or distributed to the universities, learned societies, trade and research associations and principal public libraries of Britain. The Board of Trade has now arranged for experts in each of the major fields to prepare critical summaries suitable for publication. These reports will be known as "B.I.O.S. Overall Reports" and there will be fifty of them, all of which are expected to be printed by the end of June. The first, on the petroleum and synthetic oil industry of Germany, has been published; the next six reports will be on shipbuilding and marine engineering, the German timber industry, the glass industry, the German road system, agriculture, and the rubber industry. All inquiries about these reports should be addressed directly to the Board of Trade, T.I.D.U., Research Section, 40 Cadogan Square, London, S.W.1.
