

**CORRIGENDUM**

***Reconstituted influenza virus envelopes as an efficient carrier system for cellular delivery of small-interfering RNAs***

J de Jonge, M Holtrop, J Wilschut and A Huckriede

Gene Therapy (2006) 13, 995. doi:10.1038/sj.gt.3302783

**Correction to:** *Gene Therapy* (2006) 13, 400–411.  
doi:10.1038/sj.gt.3302673

In the Materials and methods section, the paper states erroneously that an amount of 0.51  $\mu\text{mol}$  cationic lipid was used for the preparation of virosomes from 1.5  $\mu\text{mol}$  viral phospholipid. The correct amount is 0.77  $\mu\text{mol}$  cationic lipid corresponding to 34 mol% in the final lipid

mixture. The mistake affects the charge ratios given in Figure 1 and in the Results and Discussion sections. The correct charge ratios are 0.91, 2.32, 3.20, and 4.24 for virosomes prepared with 10, 22, 28, and 34 mol% cationic lipids, respectively. The mistake has, however, no effect on any of the conclusions of the paper.

The authors would like to apologise for this mistake.
