

INDEX OF SUBJECTS

- abortions, 169
 acetic thiokinase, 343
 acriflavine, 625
 adaptation, 630
 African ecology, 162
 alleles, maintenance by mutation,
 371-378
 andromorph, 458, 459
 aneuploidy, in larch, 379-385
 aspergillus, 529
 man, 532
 area effects, 167
 autoradiography, 343
 auxotrophs, 165
 8-azaadenine, 343
 8-azaguanine, 341, 342
 azure B, 544
- backcrossing, 85
 bacteria, 169
 base sequence, 532
 B-chromosomes, 535
 blood group, 9
 gene frequencies, 183
 MN, 29
 ABO, 29, 189, 461-472
 5-bromodeoxycytidine, 343
 5-bromodeoxyuridine, 343
- canalisation, 611
 cell contact, 343
 chiasma formation, 338
 localisation, 311
 chimaeras, 315
 aneuploid, 384
 triploid, 384
 chlorophyll deficiency, 622
 chloroplast, 581
 chlorosis, 592
 chromatography, 83
 chromosome, basic number, 311
 techniques, 700
 cistron, 338, 339
 clines, 30, 167, 217, 439
 clones, 658
 codons, 532
 cold treatment, 150
 colicines, 166
 colour pattern, 458
 common-B mycelium, 154
 complementation, 121, 165-171, 284
 computer-simulation, 168, 534
 conidia, 341
- conjugation, 167, 340
 controlling elements, 170, 527, 531
 conversion, 339, 342, 574
 copulation, duration of, 219
 copy-choice, 337
 crossing over, mitotic, 339, 531
 cyanogenesis, 533
 cytoplasmic, effects, 612
 factors, 138
 mutant, 625-635
- 7-deazaadenosine, 343
 diallel analysis, 665
 dicaryons, 596
 differentiation, 170
 digyny, 169
 dikaryon, 238
 dimorphism, female, 453-459
 dispersal, 439
 DNA synthesis, 150
 values, 532, 535
 dominance, evolution of, 139, 363-370, 499-
 511
 between S alleles, 345, 362
 non-linear, 345-362
 donors, 340
 drift, 146
 dry mass, 535
- ecocline, 664
 ecological bacteriology, 517
 electron microscopy, 337
 endonucleases, 340
 endosperm, 1-7
 enzymic deficiencies, 284
 episomes, 170
 epistatic effects, 83
 ethyl methane sulphonate, 530
 evolution, human, 162
 extra-chromosomal, heredity, 576, 607
- F factor, 166
 fertility, 322
 differential, 326
 finger-prints, 698
 fitness, 556, 561, 611
 flagella, 165
- gene(s), conversion, 337
 complexes, 168
 dominant, 138

- gene(s), duplicate, 1, 119
 episomal, 166
 flow, 171, 439, 655, 664
 frequency, 30
 frequency in the ABO blood group,
 461-472
 modifier, 167
 mutator, 169
 suppressor, 1
 unstable, 169
 genetic divergence, 239
 drift, 216
 system, 439
 germination, 619
 glutamate dehydrogenase, 342
 glyoxylate cycle, 343
 growth rate, 595, 612
- H^3 -thymidine, 339
 heritability, 458, 598, 604, 606, 612
 heteroallelic, 339
 heterochromatin, 147
 heterogenote clones, 166
 heterokaryon, 154, 238, 565, 570, 576, 579
 heterokaryotypes, 225
 heteromorph, 458
 heterotic effects, 83
 heterothallism, 151
 heterozygotes, 399-405
 homeostasis, 225
 homokaryon, 154
 homokaryotypes, 224, 225
 hybrid DNA, 337, 338
 hybrid enzyme, 171
 hybridisation, 168, 658
- immunity, 166
 inactivation, 531
 inbred lines, 387-397
 inbreeding, 326, 611, 615
 coefficient, 30, 471
 depression, 622, 623
 incompatibility, 622
 heterokaryon, 227
 unilateral, 131
 induction, 340, 341, 629
 infertility, 612
 instability, 531, 565
 genetic, 527-531
 karyotype, 531
 vegetative, 530, 531
 interaction, allelic, 1-7
 non-allelic, 1-7
 cytoplasmic, 303
 duplicate, 119
 genotype-environmental, 387-405, 549
 maternal, 665
 interference, negative, 337
 interrupted mating, 166
 inversions, 167, 680
- 5-iododeoxyuridine, 343
 isocitrate lyase, 343
 isolation, 168, 439, 534
- killer factor, 170
- lethal-mosaicism, 530
 linkage, 581, 592, 595
 between primary and modifying
 loci, 363-370
 to the S-locus, 473-479
 lipoproteins, 544
 lysogenisation, 340
- malate synthetase, 343
 mammals, 527
 man, 699
 mapping, 342
 maternal effects, 303, 592, 665
 mating speed, 219
 frequency, 225
 random, 439, 534
 system, 560
 maximum likelihood, 172, 551
 melanics, 70
 6-mercaptopurine, 343
 6-methyl-purine, 341, 342
 microspectrophotometry, 337
 migration, 30, 439, 534
 mixed infection, 341
 modifiers, 1-7, 145-146
 mongols, 169, 198
 monocaryons, 596
 Monte Carlo experiment, 371-378
 morphogenesis, 165
 mosaic, 566, 567, 577, 578
 mutagenic activity, 341
 ethylmethane sulphonate, 528
 hydroxylamine, 528
 nitrous acid, 528
 N-methyl-N-nitro-nitrosoguanidine, 528
 ultra violet irradiation, 528
 mutagens, chemical, 170
 mutants, leaky, 128, 165
 non-leaky, 128, 165
 mutation, non-random, 170
 rate, 371-378
 reverse, 170
- N-acetyl-ornithine- δ -transaminase, 342
 nebennuclei, 180
 nitrate reductase, 170
 nuclear body, 173, 537-545
 nucleoli, 180, 541
 nucleotide breakage, 338
 sequence, 337

- ornithine-glutamate transacetylase, 342
 transcarbamylase, 533
 8-transaminase, 533
 overdominance, 30
- paramutation, 527
 parapatric, 663
 paternal effect, 666
 pathogenicity, 341
 perianth, colour, 513-515
 petite, 625, 634
 phage, 167, 340
 phospholipids, 180
 photoproducts, 340
 phylogeny, 675
 plaque morphology, 341
 plasmon, 529
 polarons, 339
 polarity, 337, 338
 pollen fertility, 55
 tube growth, 138
 polygenes, 595
 polymorphism, 30, 146, 167, 216, 317, 321,
 439, 534, 547
 polyploidy, 159
 populations, adjacent, 649-664
 parapatric, 439
 predominantly female, 443-451
 sympatric, 439
 position effect, 527
 prophage, 340
 pseudoclamps, 154
 pseudo-compatibility, 622
 puffs, 180
 pure lines, 562
- quantitative, biology, 161
 inheritance, 85, 595
- radiation sensitivity, 339, 340, 341
 radioactivity, 700
 ramets, 529
 reciprocal differences, 303
 recombination, control, 481-498
 inter-genic, 338
 intra-genic, 338, 339
 non-reciprocal, 339
 value, 313
 regulation, 342
 replication, 337
 repression, 342
 repressor, 578
 resistance, chloramphenicol, 167
 cobalt, 631
 DDT, 581
 drug, 166
 kanamycin, 167
 neomycin, 167
 penicillin, 167
 resistance, streptomycin, 167
 sulphonamide, 167
 tetracycline, 166
 reversion, 528, 529, 578
 revertants, 527, 533
 RNA, synthesis, 544
 transfer, 533
- S alleles, 648
 dominance, 345-362
 in potatoes, 473-479
 Sampson's hypothesis, 361
 seed size, 670
 selection, 595-613, 645, 664
 artificial, 612
 directional, 303
 disruptive, 439
 haploid, 241
 intensity, 30
 natural, 612
 prenatal, 169
 pressure, 146, 610
 stabilising, 658
 vegetative, 527
 within clones, 529
 selective advantage, 625-635
 values, 547, 562
 self-compatibility, 648
 self-fertilisation, 560, 615
 self-incompatibility, 534, 637
 self-sterility, 378, 623
 sensitivity, temperature, 608
 sex chromosomes, 159, 169, 532
 linkage, 341, 534
 sex-ratio, 443-451
 sister-strand exchange, 531
 somatic polyploidy, 532
 spindles, multipolar, 384
 steady states, 529
 suppressor, 165, 533
 sympatric, 55
 synaptonemal complex, 337
 synthesis, DNA, 338
 protein, 338
- terpenes, 73
 6-thioguanine, 343
 thymidine, kinase, 343
 tritiated, 150
 tolerance, 439, 664
 cobalt, 626, 631
 transduction, 165, 166, 284, 528
 transect, 652
 transferrin, 216
 transformation, 339
 translation, 533
 translocations, 341, 581, 587, 592
 X-autosome, 531
 transposition, 170
 triploidy, 169
 trisomy, 169, 698

- ultra-violet irradiation, 340
 resistance, 166
 sensitivity, 342
uric oxidase, 170
- variegation in, *Anemone coronaria*, 513-515
 albino, 531
 virus, 341, 532
- waterlogging, 659
- variability, components of, 387-397, 399-405
variation, components of, 262
 continuous, 119
 geographic, 57
- xanthine dehydrogenase, 170
- zygotic induction, 340
