

# INDEX OF SUBJECTS

All page numbers are in italics

- age effects on heritability, *147-148*  
ageing and genetics, *146, 148*  
    mutagenesis, *147*  
altitude and cyanogenetics in clover, *291-293*  
amino acid sequences and evolution, *452*  
    replacement analysis, *452, 452-453*  
analysis of triple test cross in wheat, *173-177*  
    genotype-environment interaction in  
    large data sets, *215-230*  
ascal segregation classes, random tests on  
    sequence of, *423-433*  
assortative mating, *146*
- B chromosome selection in *Lolium*, *207-213*
- cell size control in *Schizosaccharomyces*, *143*  
chiasma map of *D. melanogaster*, *405-411*  
chromatin structure, *148*  
chromosome aberrations in human embryo  
    fibroblasts, *145-146*  
    instability in *Aspergillus nidulans*, *148*  
chromosome banding patterns in barley,  
    *395-403*  
    variation in controlling ear emergence  
    time in wheat, *335-340*  
clonal diversification of immunoglobulin  
    genes, *451*  
conditioned lines of *Nicotiana*, *357-364*  
control of  $\alpha$ -glucoside use by yeasts, *149*  
    cellular activity in yeasts, *150*  
crossing between yellow- and white-seeded  
    sorghums, *413-416*  
cultivar-environment interaction in wheat,  
    *225*  
cultural transmission, effect of, on continu-  
    ous variation, *41-57*  
cyclohexamide resistance in *Schizosaccharo-*  
    *myces*, *179-191*
- deletion mapping of genes of *Aspergillus*, *153*  
density dependent selection in *Coelopa frigida*,  
    *457*  
dispersion-selection balance in plant popu-  
    lations, *59-67*  
DNA concentration in wheat, *233*  
DNA variation in *crepis*, *441-450*  
DS-RNA in killer yeast, *129-134*
- ear emergence in wheat, control of, *335-340*  
egg laying of *Tribolium*, genotype-enviro-  
    nment interaction with, *157-171*
- environment, contrasting, effect on grass  
    population, *9-25*  
environmental variables in relation to geno-  
    type-environment interactions, *1-7*  
enzyme polymorphisms in plaice, *193-206*  
    in rats, *341-350*  
estimating number of genes in polygenic  
    systems, *69-81*  
extranuclear mutations in *Aspergillus*, *150-*  
    *151, 151, 151-152*
- gene cluster in a *Eucaryote*, *154*  
gene-environment interactions in *Sordaria*,  
    *155-156*  
gene-for-gene resistance to disease, *459-460*  
gene for gibberellin insensitivity in wheat,  
    *283-289*  
    transfer from wild to cultivated oats, *453*  
    expression, control of in *Aspergillus*, *149*  
gene mutations, *154, 154-155*  
genetic component in coronary heart  
    disease, *458*  
genetic control of DS-RNA, *129-134*  
    of cell cycle in *Schizosaccharomyces*, *143*  
    of cell division, *152*  
    immune response to ferritin in mice,  
    *454*  
    tristly in *Oxalis*, *387-393*  
genetic diversity, maintenance of in plant  
    populations, *59-67*  
genetic information, transcription of, in  
    specialised cells, *147*  
genetic map of *Drosophila*, *405-411*  
genetic polymorphism in snails, *253-269*  
genetic sexing system for *Anopheles gambiae*,  
    *456*  
genetic study on cyclohexamide-resistant  
    strains of *Schizosaccharomyces*, *179-191*  
    on pericarp pigment in *Sorghum*, *413-*  
    *416*  
genetics and ageing, *146, 147, 148*  
genetics in next 10 years, symposium on, *451*  
    of disease resistance, *458, 459*  
    enzyme polymorphs in plaice, *193-206*  
    shell colour in snails, *273*  
    susceptibility of *A. gambiae* to malaria  
    infection, *457*  
    to Leishmaniasis in mice, *459*  
genetic variation for growth rate in *Schizo-*  
    *phyllum*, *365-375*  
genotype assay, *69-81*

- genotype-environment interaction, 1-7, 83-93, 157-171, 215-230, 299-303
- genotypic adaptation, evaluation of, 215-230
- gibberellin insensitivity in wheat, 283-289
- growth of *Drosophila* on sterol mutants of yeast, 152
- heterochromatin banding technique, 395-396
- homoeologous chromosomes in hexaploid wheat, 377-385
- incompatibility in ryegrass, 417-421
- infection in relation to ageing, 146
- inheritance of  
white spotting in voles, 119  
plastid in *Pelargonium*, 95-107  
virus-like particles in yeast, 129-134
- interchange heterozygotes *v.* homozygotes, 109-112
- killer yeast, association of, with DS-RNA virus-like particles, 129-134  
virus-host relationships in, 150
- L-asparaginase regulation in *Aspergillus*, 153-154
- leaf mark polymorphism in *Trifolium*, 309-325
- linear regression analysis of genotype-environment interaction, 83-93
- metabolic disease and dominance, 459
- mildew development, inhibition of, in oats, 453-454
- molecular mimicry as a pathogenic mechanism, 455
- mutagen sensitivity of yeast, 144  
in cells from human syndromes, 145
- mutant genes in *D. simulans*, 295
- mutants, cyclohexamide-resistant, 182  
Trichodermin-resistant, of yeasts, 143-144
- mutation, 2-strand, in irradiated yeast cell, 144  
inherited, suppressors of, in *Aspergillus*, 153
- neoplastic transformation, susceptibility to, in xiphophorine fish 454-455
- nitrate reductase activity, 455-456  
regulation, 154
- nucleolar suppression in an interspecific *Crepis* hybrid, 441-450
- nucleotide sequence organisation in wheat, 231-252
- pericarp pigments in *Sorghum*, 413-416
- phenotypes in conditioned lines of *Nicotiana*, 357-364
- phenotypic changes in amoeba flagellate, 149
- plant populations, dispersion-selection balance in, 59-67
- plastid inheritance in *Pelargonium*, 95-107
- polygenic system, estimating genes in, 69-81
- polymorphism in *Trifolium*, 309-325  
enzyme, in rats, 341-350  
hexokinase of *Drosophila*, 458  
and stability of disease in cereals, 460
- populations at environmental boundaries, 9-25
- post-replication repair in *E. coli*, 461
- random tests on ascus sequences, 423-433
- R-DNA and bobbed phenotype in *Drosophila*, 351-355
- reciprocal translocations of chromosomes, 457
- regression coefficients, bias in estimation of, 299-303
- reproductive performance of white-spotted voles, 113-128
- reversion analysis in *am* gene of *Neurospora*, 453
- Ribosomal-DNA constancy in *Crepis*, 441-450
- R-RNA genes in wheat, 377-385
- selection of B chromosomes in *Lolium*, 207-213  
interchange heterozygotes, 109-112  
semi-dwarfism in wheat, gene for, 283-289
- sex chromosomes of the tree mouse, 435-439
- sex ratio in *Viscum fischeri*, 27-40  
in voles, 123
- shell colour in land snails, 253-269, 271-282
- somatic cell genetics, 451
- spontaneous recombination in *D. simulans*, 295-298
- supergenes in polymorphic snails, 253-269, 271-282
- suppressor genes, 154-155, 155
- translocation heterozygosity in *Viscum*, 27-40
- triple test cross analysis in wheat, 173-177
- two-way pattern analysis, 215-230
- tristylly, genetic control of, in *Oxalis*, 387-393
- variability of mandible shape in mice, 454
- variation, continuous, effect of cultural transmission on, 41-57  
estimating number of genes controlling, 69-81
- variation in *Schizopphyllum*, 365-375
- wheat cultivar-environment classification, 218-221
