Nature 458, 524–528 (2009)

In this Letter, there is a discrepancy in Figures 3d and 4b between the size of the error bars and the reported *P* values. We have found that in contrast to the other Figures in this paper, the error bars in these two instances represent the standard deviation and not the standard error of the mean. We regret this manuscript preparation error, which does not affect the conclusions or interpretations of the paper.
