After publication of this Letter, we became aware that we had not reported the details of construction and validation of our floxed conditional deletion *Ptpn11* allele. These details are presented in the Supplementary Methods and Supplementary Fig. 1 of this Corrigendum. We also stated in our manuscript that *PTPN11* is not mutated in human hepatocellular carcinoma, but it has been brought to our attention that a low frequency of copy number abnormalities involving the *PTPN11* locus in this disorder has been reported¹. However, comparable numbers of amplifications and deletions were observed, making it difficult to conclude from the data in ref. 1 that *PTPN11* acts as a tumour suppressor gene in hepatocellular carcinoma.

Supplementary Information is available in the online version of the Corrigendum.
