

# FREE LITERATURE

**Enzymes and Reagents.** Nucleic-acid-modifying enzymes and other molecular biological reagents feature in the new 28-page catalog from Stratech Scientific (Luton, U.K.). The publication also describes affinity chromatography matrices and a series of kits including the HuGe DNA Detection Kit for human genomic DNA.

**Membrane Selection Guide.** Millipore (Bedford, MA) provides a color-coded wall chart listing over 75 membrane types and applications. It allows quick cross-referencing of membrane type, pore size, protein binding, bubble point, and other useful information for anyone who works with membrane filter sheets or disks.

**Introductory Offer.** Amgen Biologicals (Thousand Oaks, CA) is now offering special introductory pricing on its new recombinant factors, including cytokines, monoclonal antibodies, and DNA probes. Its November 1990 product list features factors cloned, expressed, and purified by the company. Each is the human sequence, except where noted.

**Purifying Fast.** A brochure from FMC (BioSupport Materials Division, Pine Brook, NJ) describes its Acti-Mod™ separation-purification modules for large-scale preparation and production of proteins and antibodies. The modules purify gram-to-kilogram amounts of proteins in minutes, and are available with Protein A, Protein G, amino, GTA, SP, and CM chemistries.

**Isolation of Cells.** Accurate Chemical's new 20-page catalog details a full line of cell separation media for centrifugation, isolation, and biological separation, including density gradient media, defined polymers, and instrumentation. A cross-reference helps users match applications with products.

**Library Materials.** The American Type Culture Collection (ATCC, Rockville, MD) announces the availability of the fourth edition of the ATCC/NIH repository catalog of human and mouse DNA probes and libraries. The 216-page volume lists ATCC materials available to researchers, including human chromosome-specific genomic libraries, probes and clones for oncogenes and transforming proteins, and bacterial hosts for transformation or plating libraries.

**Freeze Driers.** Usifroid (Maurepas, France) describes its new brochure as an "at-a-glance guide" to its range of freeze driers. The document gives details about

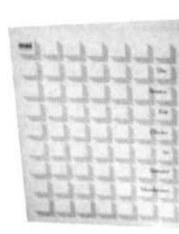

key features of the equipment (doors, shelves, condensers, and chambers) and deals with questions of installation, control, regulation, and training.

**Biotech Books.** Stockton Press (New York, NY) offers several pamphlets describing its most recent directories and texts for biotechnologists. Titles include *Genetically Engineered Human Therapeutic Drugs*, *Intellectual Property Rights in Biotechnology Worldwide*, *Software Directory for Molecular Biologists*, and *Biotechnology Guide Japan*.

**Membrane Detection.** Micron Separations (MSI, Woburn, MA) offers a brochure and applications chart featuring membranes for radioactive and nonradioactive detection systems, UV crosslinking, reprobing, single-copy genes, and DNA fingerprinting. The chart serves as a guide to selecting the right membrane for a given detection system and procedure.

**Ultra Bulletins.** Filtron Molekularfiltrationstechnik (Karlstein/Main, Germany) has produced a series of six four-color brochures describing its entire range of

ultrafiltration products. The literature is intended to help researchers and production managers make informed choices when it comes to significant investments such as scale-up or continuous processes.
