

---

In the letter by Wu et al. (*Nature Cell Biol.* **8**, 398–406; 2006), the title was incorrect and should read as follows:

## Sensing of Lys 63-linked polyubiquitination by NEMO is a key event in NF- $\kappa$ B activation

In the last paragraph of the main text, the second sentence should read as follows:

For example, ligation of the T-cell receptor (TCR) results in NF- $\kappa$ B activation through a molecular complex that includes Bcl10, Malt1 and CARMA1.

In the Methods, the ninth sentence in the Cell lines, Plasmids and Reagents section should read as follows:

Murine RIP was cloned into pGEX4T2 at the sites of *Bam*HI and *Xho*I to produce GST-RIP.

These errors have been corrected online.
