*Nat. Genet.* 40, 886–891 (2008); published online 18 May 2008; corrected after print 29 July 2008

In the version of this article initially published, there were two errors in the numbers reported in the abstract. The correct odds ratio for the association of the *ASIP* haplotype with risk of basal cell carcinoma is 1.35, and the correct *P* value for the association of the *TYRP1* variant with risk of cutaneous melanoma is  $4.3 \times 10^{-4}$ . These errors have been corrected in the HTML and PDF versions of the article.
