

Corrigendum: Permafrost carbon as a missing link to explain CO₂ changes during the last deglaciation

K. A. Crichton, N. Bouttes, D. M. Roche, J. Chappellaz and G. Krinner

Nature Geoscience **9**, 683–686 (2016); published online 22 August 2016; corrected after print 6 September 2016.

The original version of this Letter contained a typographical error in the final sentence of the first paragraph in the main text. This sentence should have read ‘The ratio, described by its $\delta^{13}\text{CO}_2$ value⁷, is strongly affected by the exchange of carbon between the biosphere and the atmosphere because photosynthesis preferentially takes up ¹²C, resulting in a low $\delta^{13}\text{C}$ in biosphere-derived carbon, at a mean value around -25‰ (ref. 8)’. This has been corrected in all the online versions of this Letter.
