

Immunology and immunotherapy of Alzheimer's disease

Howard L. Weiner and Dan Frenkel

Nature Reviews Immunology **6**, 404–416 (2006); doi:10.1038/nri1843

When published, the fifth and ninth rows of Table 2 had information missing. The corrected rows are shown below.

Immune transgene or gene knockout in APP-transgenic mice	Effect	Reference
<i>Ccl2</i> transgene	<ul style="list-style-type: none">• Increased amyloid-β deposition by reducing amyloid-β clearance through increased apolipoprotein E	139
<i>Igμ</i> knockout (B-cell deficient)	<ul style="list-style-type: none">• No effect on total amyloid and fibrillar amyloid-β load in the brain• No effect on EAE-induced amyloid clearance	102
