
ERRATUM**C-TYPE LECTIN RECEPTORS ON DENDRITIC CELLS AND LANGERHANS CELLS**

Carl G. Figdor, Yvette van Kooyk and Gosse J. Adema

Nature Reviews Immunology **2**, 77–84

The human *CD69* gene maps to the natural-killer gene complex on chromosome 12p, not chromosome 19 as stated incorrectly in this Review. For further details, see López-Cabrera *et al.* Molecular cloning, expression and chromosomal localization of the human earliest lymphocyte activation antigen AIM/CD69, a new member of the C-type animal lectin superfamily of signal-transmitting receptors. *J. Exp. Med.* **178**, 537–547 (1993).

Also, reference 26 in this article should have been Arce, I. *et al.* Molecular and genomic characterization of human DLEC, a novel member of the C-type lectin receptor gene family preferentially expressed on monocyte-derived dendritic cells. *Eur. J. Immunol.* **31**, 2733–2740 (2001).

A. Dzionek *et al.* (REF. 3 in the original Review) have published the molecular characterization of the BDCA-2 antigen and have shown that it is encoded by the same gene as DLEC (HGMV-approved symbol *CLECSF11*). Therefore, DLEC and BDCA-2 are the same protein.
