

EASY TO APPLY FLUORIDE VARNISH

Exclusively available from Trycare, Centrix's FluoroDose is the award winning 5% sodium fluoride varnish that's easy to apply in less than a minute.

To make your life easier, Centrix's redesigned FluoroDose packaging has new patented features to enhance its handling, comfort and patient safety. In addition to a single dose of varnish, each LolliTray contains a Benda Brush applicator and has been designed so that it can be 'popped up' with one hand, making removal simple and safe.

FluoroDose has a smooth consistency, fast application and choice of five patient-pleasing flavours – caramel, bubble gum,

mint, cherry and melon. It is supplied in an Introductory Pack containing all five flavours and refills of individual flavours.

Because the varnish is freshly mixed prior to application it always has the optimum fluoride distribution, unlike syringes which frequently separate out leaving inconsistent mixes of ineffectively low and dangerously high fluoride concentrations. Each LolliTray contains enough varnish to protect a full adult dentition. Non-gritty and easy to apply in an undetectably thin film, it is colourless so that it does not affect the appearance after bleaching etc.

Quick-drying and long-lasting, FluoroDose is suitable for adults with caries risk factors as well as children.

It can be applied as often as needed and is FDA-approved for treating dentinal sensitivity.

For further information about the complete Centrix range contact your local Trycare representative, call 01274 885544 or visit www.trycare.co.uk.

ENABLE PATIENTS TO CLEAN EFFICIENTLY

As brushing alone only reaches up to 60% of the surface of teeth,¹ a solution that can tackle the remaining 40% – the surfaces between teeth and just below the gumline – is a must.

Interdental brushes help to prevent gum disease by getting rid of food debris and plaque from between the teeth.

iWave interdental brushes from Oraldent are very flexible, enabling patients to efficiently clean around their teeth. Each brush features a plastic-coated surgical wire to ensure the teeth and gums are protected, and even hard-to-reach areas can be cleaned thoroughly. They are ideal for use around implants and orthodontic appliances too. Products are colour-coded for easy selection, and also come with hygienic caps.

To find out more about iWave interdental brushes, get in touch with the team today.

For more information about the iWave range of interdental brushes, visit <https://www.oraldent.co.uk>, call 01480 862080 or email info@oraldent.co.uk.

DENTAL FLOSS MADE FROM RECYCLED PLASTIC BOTTLES

Oral health brand TePe has introduced a new dental floss made from 100% recycled plastic water bottles.

TePe is dedicated to developing more sustainable products, without compromising on function and quality. TePe Dental Floss does just that, with 150 metres of floss 'saving' two 0.5 litre plastic water bottles from landfill.

Not only does TePe Dental Floss give new life to old bottles, it's also free from PFAS chemicals and comes in a 100% recyclable outer carton made from FSC paper and container made from recycled raw materials.

Recommended for daily use, TePe Dental Floss removes plaque from between the teeth to help prevent gum disease and cavities, with a mint flavour leaving the user feeling fresh.

Developed in collaboration with dental experts, TePe Dental Floss has been designed for efficiency and comfort. The floss expands and adapts to suit all gaps between the teeth, becoming softer during use to create a 'brush effect', with high cleaning efficacy.

Coated in vegetable wax and avocado oil, the strong floss glides easily between the teeth without dissolving, with multiple threads and an increased surface area to make for efficient cleaning.

TePe Dental Floss is available to buy now at dental wholesalers and TePeDirect.com (RRP: £3.50).

For more information, contact TePe or speak to your brand representative.
