

A helpful test for peace of mind

As an innovator in early oral cancer detection solutions, the BeVigilant OraFusion system from Vigilant Biosciences helps clinicians to diagnose oral cancer in Stages I and II to accelerate treatment and improve patient outcomes.

The early signs of oral cancer can be easily mistaken for other conditions, like mouth ulcers. As such, it's important that clinicians regularly conduct examinations to monitor the health of the mouth, and become more confident identifying early symptoms of mouth cancer. If a clinician spots a suspicious lesion, the BeVigilant OraFusion system can be used to identify the presence of biomarkers associated with oral cancer, producing a result in 15 minutes or less. The results of the test can then be used to inform referral for specialist care.

Find out more about the helpful pre-diagnostic test, contact the team.

A more comfortable solution for OSA patients

Would you like to offer your patients a better solution for obstructive sleep apnoea (OSA) treatment? Traditionally, OSA patients are recommended CPAP treatment, however, many patients choose to stop this treatment type due to its unpleasant side effects.

OADS offers an alternative. O2Vent is an oral device that is customised to fit each patient, helping to deliver a comfortable and discreet OSA treatment. If there's a blockage, the device draws air in, allowing it to reach the back of the throat. Plus, the device stabilises the lower jaw, brings the tongue forward, and opens the airway, offering an effective treatment for OSA.

If you'd like to find out more about the innovative O2Vent solution from OADS, visit the website and get in touch with the team.
