

Support oral health during aligner treatment

Maintaining excellent oral hygiene during orthodontic treatment is essential for predictable outcomes. As such, Curaprox offers Aligner Foam, the innovative solution for patients with clear aligners.

Aligner Foam is formulated using CITROX, a natural bioflavonoid which provides antibacterial, antioxidant, and anti-inflammatory properties, as well as hyaluronic acid to restore moisture and promote healthy teeth and gingiva.

Patients can either swish the Aligner Foam around their mouth after brushing for a quick boost, or place the foam directly into the aligners to maximise its long-term effects.

To discover more about Aligner Foam from Curaprox, contact the team today.

For more information, visit www.curaprox.co.uk.

Think big to succeed

When you want your practice to succeed, you always have to think big. The CS 8200 3D Neo Edition from Carestream Dental follows this mantra, with an extended field of view that provides clinicians with an advanced ranged of imaging options.

Nine selectable solutions range from 4 cm x 4 cm to 12 cm x 10 cm to cover virtually all of your diagnostic needs, even including the ability to scan the full arch. This minimises the number of exposures a patient may need, protecting their long-term health.

The safety of those in the chair is also helped by low-dose imaging, delivering

high-quality 3D images at the same or lower dose as a standard panoramic exam, while retaining brilliant detail for informed diagnoses.

Don't limit yourself to 3D images. By choosing to use the CS 8200 3D Neo Edition, you can also obtain 2D panoramic results alongside 3D model scanning, for any number of clinical needs.

To learn more about the larger-than-life CS 8200 3D Neo Edition, contact the team today.

Join a community of passionate professionals

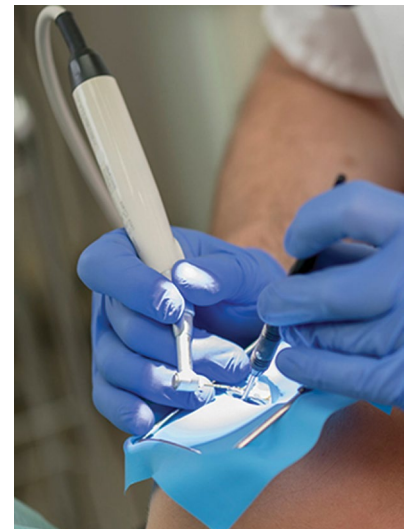

Are you looking to expand your knowledge of endodontics? The British Endodontic Society (BES) is a community of professionals passionate about endodontics who support their members in their continued education in the field.

With membership benefits including reduced rates for BES events, membership to the IFEA, and a monthly copy of the *International Endodontic Journal*, BES members stay at the cutting-edge of progress in the field.

BES events bring together experts in the field to deliver high-quality sessions on the latest topics in endodontics. The BES Early Career Group also means that, if you're in the early stages of your career in endodontics, there's a community for you.

If you'd like to become a member of the BES, get in touch.

For more information about the BES, or to join, visit the website www.britishendodonticsociety.org.uk or call 01494 581542.

Enhanced reproducibility

In order to provide patients with predictable endodontic treatment, clinicians should employ techniques which are fast and reliable, while ensuring safety.

The HyFlex EDM OGSF file sequence from COLTENE includes a new Orifice Opener and Glidepath file for opening the glide path, as well as a Shaping file for shaping the root canal over the full length, and a Finisher file. The file sizes and tapers are optimised to provide a

smooth feeling when changing from one file to another – for better control during treatment.

Ideal for both simple and complex root canals, HyFlex OGSF files enable accurate penetration up to the working length – effortlessly.

To find out more, contact the team at COLTENE. Email info.uk@coltene.com or call 0800 254 5115. COLTENE loyalty scheme <https://rewards.coltene.com>.
