New products and focus on CPD & education and financial & legal services

EXPRESS HANDPIECE SERVICING

The Dental Directory can help you plan, delivery and install your new imaging system with the minimum disruption to your surgery. They offer the most comprehensive range of digital imaging systems available from the world's leading manufacturers such as Schick, Gendex, Satelec, E-Woo and Durr.

Attractive finance packages are also available from leading institutions, so whatever your requirements are for a new or upgrade system – The Dental Directory can help. In addition, Handpiece Express can service and repair all types of handpieces, motors, couplings and sonic scalers from most of the leading manufacturers.

With repairs starting from as little as £19.50, service packages from just £35 and a 'serviced and dispatched in 24 hours' guarantee (subject to conditions), The Dental Directory has gained a reputation for value, workmanship and service.

Every repair and service is guaranteed, with each instrument tested to ensure its performance matches or exceeds original manufacturer tolerances.

UNPARALLELED ENDODONTICS TRAINING

On offer to GDPs with at least three years of clinical experience, the Post-graduate Diploma in Endodontic Practice provides unparalleled hands-on training in endodontics over two years.

The first year, taught over 24 full days, provides academic, practical and clinical training delivered through seminars and lectures as well as skills training using extracted teeth in the UCL Eastman Dental Institute's state-of-the-art skills laboratories. The second year of the course gives participants the opportunity to treat referred patients under supervision in the newly equipped surgeries at the UCL Eastman CPD site at 123 Gray's Inn Road, as well as attending Consultant new patient clinics at the main Eastman hospital site to further their diagnostic and treatment planning skills.

Designed for busy practitioners who wish to enhance their knowledge of and expertise in endodontics whilst continuing to work in practice, the course is divided into three components: Endodontic Sciences, Clinical Endodontics and Practical Endodontics.

The learning experience is supported by an interactive website where participants can read course material and take part in online discussions. The programme has been designed to assist in meeting the competency requirements for 'Dentists with a Special Interest in Endodontics', and to give its successful participants the confidence and skills required to treat patients on referral.

STATE-OF-THE-ART FILTRATION

The IQAir Dental Series has been specifically developed to deal with contaminants commonly found in dental environments. These high-efficiency air cleaning systems feature state-of-the-art filtration technologies which effectively remove harmful airborne contaminants and unpleasant odours. Two distinct IQAir models are

available: the IQAir Dental Hg with FlexVac and the IQAir Dental Pro.

The IQAir Dental Hg with FlexVac is a mobile source-capture system with a flexible, self-supporting suction arm. Positioned close to the patient's head, it is designed to remove mercury vapour, drill aerosols, bacteria, viruses and latex allergens. The IQAir Dental Pro is a mobile recirculating air cleaning system that has been specially developed to filter those gases and particulates found in the ambient air of dental environments, such as VOCs, micro-organisms, formaldehyde, glutaraldehyde, disinfectant vapours, mercury vapour, odours and dust particles.

There is also a brand new website dedicated to dental practice infection control, DentistHygiene.co.uk, which provides expert reviews and product recommendations.
