

WORK FASTER AND EASIER WITHOUT WHITE SPOTS

Fuji Ortho LC is available in GC's ultra-convenient automix delivery system. This means that as well as the convenience of light-curing, you can also enjoy the freedom of choice of quantity, but always with guaranteed correct mixing ratios.

Fuji Ortho LC is the first light-cured, resin reinforced glass ionomer for bracket bonding. Now you can work faster and easier, whilst securing the full strength needed without decalcification (white spots) at debonding. Fuji Ortho LC delivers benefits that composites cannot claim. It is moisture friendly so it bonds perfectly in a wet field. It can be used with either a non-etch or etch technique and no separate bonding agent is needed. As it is less technique sensitive you can dramatically reduce chairside time.

Fuji Ortho LC light cures in 20-40 seconds with instant strength and the material will even set chemically in the absence of light. You can insert levelling wire during the same visit.

Advanced glass-ionomer technology bonds brackets with ample strength for even the most aggressive treatment, yet is easy to remove at case completion without damaging the enamel. Final clean up is fast and trouble-free.

After many years of clinical trials brackets were debonded without decalcification. Fuji Ortho LC releases significant levels of fluoride to help prevent decalcification and decay. Plus the fluoride in toothpastes and mouthrinses actually recharge its fluoride release capacity.

EXPERT REPAIRS FOR YOUR EQUIPMENT

DENTSPLY's UK Repair Centre offers an expert service; their fully trained and experienced engineers work to manufacturers' specifications ensuring your DENTSPLY machine is operating within the correct parameters.

The DENTSPLY UK Repair Centre can help with issues on a multitude of products, including: Cavitron Scalers; X Smart, X Smart Dual, X Smart Plus and WaveOne endodontic motors; RayPex 5 and ProPex II apex locators; Calamus Dual and ThermalPrep 2 obturation equipment;

the DuoMix II impression material extruder; the Promix amalgamator; and the Smartlite PS curing light.

Repairs performed at the DENTSPLY UK Repair Centre are returned with a 'Repair Record'. This details the name of the engineer, a unique repair number, the machine's serial number as well as the repair date and diagnosis. This document can be presented in a CQC inspection as evidence of equipment being 'properly maintained and repaired by people who are competent to do so', as stated in Outcome 11 of the Care Quality Commission guidance on safety, availability and suitability of equipment.

Technical helpline number 01932 837 332. Visit www.dentsply.co.uk or call 0800 072 3313.

CUTTING YOUR ENDODONTIC COSTS

Whatever your endodontic requirements are, be they manual or mechanical endodontic instruments, reamers or gp points, you will find a huge selection of leading named products in Plandent's portfolio.

To further enhance their range, and your choice, Plandent

produce a superb selection of high quality own branded products under the label of Orbis, at extremely competitive prices. For example, Orbis stainless steel hand files are priced at just £3.49 a pack, Orbis Paper Points are £1.56 a pack and a pack of Orbis GP Points are £1.80 whatever size you choose. Although the prices may seem cheap the products are manufactured to the very highest specification, without compromise.

So, let Plandent help you to cut costs and Freecall 0500 500 322 today.

A NEW CONCEPT IN CANAL PREPARATION

RECIPROC, from Quality Endodontic Distributors Ltd, is not just a new file, but a new concept in canal preparation. It can help you save thousands of pounds a year.

RECIPROC is the first one file system where no glide path is required (in most cases). It works with a reciprocating action which is driven through the VDW Silver RECIPROC motor, which can also be used with conventional rotary file systems.

RECIPROC is made from M-wire NiTi which is stronger and more flexible than standard NiTi. There are three files in the range which all have a regressive taper, which means that the apical portion

of the file has the greatest taper. The RECIPROC file sizes are R25 (08/25), R40 (06/40) and R50 (05/50). Each is available in lengths 21, 25 and 31 mm. The system also has matching gutta-percha and paper points.

Supplied sterile in blister packs, RECIPROC is exclusive to Quality Endodontic Distributors Limited.
