STUDENTS ADVISE SJÖGREN'S SUFFERERS

Dental students from Plymouth University Peninsula Schools of Medicine and Dentistry have worked with local people with Sjögren's syndrome to create an oral health advice leaflet which is to be made available via the British Sjögren's Syndrome Association.

The students have worked with the local group as part of their programme of special study units, interacting with a wide variety

of groups in the community. The Sjögren's syndrome sufferers have visited the Plymouth University Peninsula Schools of Medicine and Dentistry Dental Education Facility at Derriford, Plymouth, for information and advice presentations. The group and students have also visited the Wrigley Company Limited factory in Plymouth (pictured), as sugar-free chewing gum is a potential stimulant for saliva.

Those with Sjögren's syndrome need to take greater care with oral hygiene than most because they do not produce sufficient levels of saliva which help to control acid levels within the mouth.

GOVERNMENT LAUNCHES SALT STRATEGY

Alongside continuing headlines on the sugar content in food and in our diets, the Government has launched a major drive to help reduce the amount of salt we eat by a quarter.

Research figures from the Department of Health (DH) show that 53% of the public rarely or never consider salt content when buying food, despite 86% of people knowing that too much salt is bad for their health, causing high blood pressure, which could lead to heart disease and stroke.

Public Health Minister Anna Soubry has launched a new 'Salt Strategy' which outlines how the DH will help people reduce their daily intake from an average of 8.1 g a day towards the 6 g a day goal. It will revise 2012 salt targets for industry; push the catering and take-away sector to do more; ask companies to help people choose lower salt options; and get more companies across the food industry to sign up to salt reduction.

Ninety companies have already signed up to make salt reduction a priority.

SUBMIT YOUR VIEWS ON ORAL HEALTH TARGETS

The Platform for Better Oral Health in Europe is seeking views on their draft European targets in a consultation that runs until December this year. The targets are intended to serve as a basis to benchmark EU Member States' progress towards increased prevention of oral diseases and improved oral health in Europe by 2020.

The targets specifically address the issues of improving collection systems, preventive policies, and education and awareness. The platform hopes to involve stakeholders and professional associations across member states in helping to further refine and focus the proposed targets.
