

Predictably control oral infections in just four weeks

OraVital Inc., the Toronto-based developer of the OraVital System for the diagnosis and treatment of the oral infections that cause periodontal disease, peri-implantitis, halitosis and caries, recently signed a distribution agreement naming Stat Health Group as its exclusive sales agent in the UK.

Under the terms of the agreement, Stat Health Group will be responsible for introducing UK dental practices to the OraVital System and providing them with the necessary training, marketing support and logistical management of OraVital's biofilm test lab analysis and prescriptive antimicrobial rinses.

By using the OraVital System, UK dental professionals can now predictably control the oral infections that cause periodontal disease, peri-implantitis, halitosis and caries in 90% of their affected patients in just four weeks. OraVital proprietary rinses treat the entire oral complex and are non-systemic. What's more, the OraVital System is the only closed-loop protocol that can predictably treat the oral-systemic link.

OraVital Inc. also provides a comprehensive, dynamic and scientifically-grounded training programme to its certified clinics. OraVital certified dental professionals are authorised experts in providing OraVital diagnostic analysis, individualised treatment, and dedicated long-term support. For more information, visit www.OraVital.com. For UK enquiries, contact Stephen Judge at 07971 665484 or info@stathealthgroup.com.

New home whitening kit

Quickwhite would like to introduce the new home whitening kit. Presented in an attractive, compact, recyclable tube, the home kit is available in five syringes, ten syringes or a convenient top up kit with two syringes.

The kit comes in a choice of 10% or 16% carbamide peroxide or 6% hydrogen peroxide, the syringes are large 3 g, giving you more value for your money. Custom packaging will also be available.

The Quickwhite formula has a built-in desensitiser, which allows for a more comfortable treatment for patients with sensitive teeth. Oxygen free radicals provide rapid whitening, which means results can be seen in less than a week, if patients are compliant.

Quickwhite have been manufacturing teeth whitening since 1992, so you can be confident that Quickwhite is trusted, reliable and effective.

Order your whitening kit now, call Quickwhite on 01227 780009, or visit www.quicklase.com.

Coaching patients into better habits

Using Smart Sensor technology, the new Philips Sonicare FlexCare Platinum Connected features a precision guided tooth brushing system which provides 100% visibility of trouble spots with unique 3D mouth-map technology. Developed with oral healthcare experts, the state-of-the-art sensors track and analyse the patient's brushing routine to coach them into better habits.

Philips designed the Sonicare FlexCare Platinum Connected to help patients follow advice from their dental practitioner in-between check-ups, for healthier, whiter and happier smiles.

The connected toothbrush syncs with the Philips Sonicare app via Bluetooth to track brushing habits in real time and

provides a personalised 3D mouth-map to help coach patients on their brushing technique. Patients will never miss another trouble spot again to achieve the healthiest smile yet.

To help patients comply with guidance from their dental practitioner, Philips has designed the 'Focus Areas' feature, accessed via the Philips Sonicare app. Dental practitioners can help identify specific spots in the patient's mouth which need more attention due to plaque build up, gum recession and other issues. This is highlighted in the patients' personalised 3D mouth-map so they have a reminder to take extra care of these areas between check-ups.

A new look for the alcohol free disinfectant range

Kemdent are pleased to announce a new look to the ChairSafe Disinfectant Alcohol Free range. The ChairSafe range has been an effective companion to dental nurses and dental practices since 2010, fighting the battle to protect patients and staff alike.

Visit www.kemdent.co.uk and find out about ChairSafe in the 'Clinical Article Safe and clean ... the benchmark for compliance and Best Practice' featuring Sarah Bain from Bristol University.

ChairSafe is alcohol free and is specially formulated to clean sensitive surfaces and equipment, including the leather and synthetic facings of dental chairs.

But it is also ideal for patient frequently touched surfaces eg door handles and work surfaces.

ChairSafe is effective against HBV/HIV/HCV/BVDV/vaccinia,

bactericidal and fungicidal microorganisms within one minute of application. ChairSafe disinfectant, if used correctly, will guarantee a safe inactivation of influenza A (H1N1) – viruses (pathogens of swine flu).

Why not try ChairSafe alcohol free disinfectant? The proven, highly effective, cost effective solution to cross infection control needs within the practice.

Visit the Kemdent website at www.kemdent.co.uk to take advantage of the special offers available. Contact Kemdent on 01793 770256 or email sales@kemdent.co.uk.
