

Functionality, longevity and aesthetics

From fundamental concepts to advanced skills, VOCO's minimally invasive restorative dental materials focus on physical properties, biocompatibility, aesthetics and ease of use.

Based on advances in research and dental material science, GrandioSO is a universal nano-hybrid restorative from VOCO that meets the highest demands for restorations in both anterior and posterior regions. GrandioSO is suitable for Class I to V restorations, reconstruction of traumatically injured anteriors, interlocking and splinting of loosened teeth, correction of shape and shade for improved aesthetic appearance, repairing veneers, core build-up for crowns and the fabrication of composite inlays.

GrandioSO stands out due to its superb toothlike material properties, providing durable and aesthetic restorations and longevity, thanks to a very high filler content (89 w/w%) and low shrinkage (1.61%). An optimal balance of opacity and translucency mirror the natural tooth, using only one shade and is compatible with all conventional bonding agents.

VOCO's pioneering GrandioSO offers optimal handling properties to guarantee first-class long-term results. Due to its smooth consistency, the material is readily packable and possesses excellent sculptability, without the tendency to stick to the instrument. It easily polishes to a high gloss to create a long-lasting, smooth and lustrous surface finish.

A smart toothbrush in more ways than one

Philips Sonicare has revealed a new flagship innovation – the DiamondClean Smart – dubbed the world's most intelligent toothbrush. The new brush uses unique connected technology to inspire and motivate patients to take better care of their oral health. It delivers exceptional oral care results by harnessing built-in smart sensor technology in both the toothbrush and brush heads and personalised coaching within the platform to help improve patients' brushing technique and ultimately achieve a healthier mouth. The new brush seamlessly syncs with the Philips Sonicare app, giving users real time data, feedback and

guidance to empower them to proactively manage and improve their oral health.

DiamondClean Smart is smart in more ways than one – it also has dramatic bathroom appeal with its matt black handle, black brush head and charge-in-a-glass technology. The brush can also be charged using a computer USB to top up whilst travelling.

Philips interproximal cleaning device, the AirFloss, has been upgraded with a new Charge and Fill docking station. The new add-on allows users to automatically refill their AirFloss with water or mouthwash in less than ten seconds without worrying about juggling bottles or spills. The compact docking station filler holds enough liquid for two weeks' worth of cleaning, without the fuff. At the end of the one minute, full mouth clean the AirFloss can then re-dock to keep the device charged and ready to use (although it holds two weeks charge for people on the go).

For further information on the latest Philips innovations visit www.philips-tsp.co.uk or call 0800 0567 222.

Optimised glide path for reciprocating files

The new WaveOne Gold Glider from Dentsply Sirona completes the WaveOne Gold system, optimising canal preparation for WaveOne Gold shaping files, which, in the majority of cases, can be finished with a single primary file.

The new file is developed in the best traditions of the WaveOne Gold philosophy:

- Gold treatment and parallelogram cross section, offering patient safety
- Same reciprocating motion
- Sterile and single use.

Compared to handfiles, WaveOne Gold Glider offers additional benefits in glide path management:

- Respect of the canal's natural shape
- Increased ability to navigate sclerosed, curved and narrow canals
- Time saving in difficult canals resulting in increased irrigation time.

WaveOne Gold Glider comes with a size 15 tip and should be used on the same motor settings as WaveOne Gold. The new file offers the perfect choice in glide path management when using reciprocating files. The file is offered in parallel to the world's leading rotary glide path file: ProGlider – the ideal choice for rotary system users.

The WaveOne Gold complete solution allows WaveOne Gold users to experience a new level of confidence and safety throughout treatment, from glide path management to obturation and is available from 19 June from Dentsply Sirona.

To find out more about the complete WaveOne Gold reciprocating solution contact your local Dentsply Sirona Territory Sales Manager on 0800 072 3313.
