

Declare your dedication to safety

Demonstrate your conviction and commitment to safe dentistry by selecting strong and superior examination gloves from Unigloves.

As an expert in the field of single-use gloves, Unigloves has developed the Vitality Range of premium latex and nitrile gloves specifically for the dental sector:

- **Vitality Latex** – 100% latex, powder free, single use gloves with a naturally moisturising lanolin and vitamin E coating to protect and nourish the skin
- **Vitality Mint Latex** – 100% latex, powder free, single use gloves with natural moisturisers and scented with citrus and peppermint for a pleasant taste
- **Vitality Nitrile** - latex free, powder free, single use gloves with a natural coating of lanolin and vitamin E.

Every pair features double-chlorinated beaded cuffs to make them easy to use and a micro-roughened surface for excellent grip and dexterity.

The Vitality Range is fully compliant with all relevant UK regulations and with the purpose of delivering safety through quality; Unigloves ensure that their gloves are produced to the very highest standards with precision and care.

To make a positive statement about hygiene and infection control at your practice, contact Unigloves today. www.unigloves.co.uk

Protect the future of your patients' teeth

The all new CALCIVIS Imaging Device will enable you to identify and treat active carious demineralisation before it's too late.

Due to the way caries detection has been carried out in the past, many instances of tooth decay have been missed, meaning that restorative work – rather than remineralisation therapy – becomes necessary. But with the CALCIVIS Imaging Device, this will no longer be the case.

By using a unique photoprotein that reacts with free calcium ions (which are present during the early stages of enamel demineralisation), the CALCIVIS Imaging Device creates a bioluminescent marker that can be used to predictably map demineralisation at its most reversible stage.

This allows dental professionals to plan and initiate bespoke remineralisation therapy in time to save the natural structure of the tooth – paving the way for a truly preventive approach to dental caries treatment. To help protect the future of your patients' teeth, contact the expert CALCIVIS team to find out more about the innovative new CALCIVIS Imaging Device today.

For more information visit www.CALCIVIS.com, call 0131 658 5152 or email info@calcivis.com.

New products for oral care and healing

StellaLife, an innovator in biotechnology products, has launched a new line of products for oral pain management, accelerated healing, and long-term oral healthcare. The patent-pending VEGA Oral Care system is formulated to improve dental postsurgical recovery and optimise oral systemic health. It is the first line of products launched by StellaLife.

The VEGA Oral Care system consists of three natural products: a gel, a rinse, and a recovery kit that contains a spray in addition to the gel and rinse. The VEGA products accelerate healing and reduce pain, swelling, and bruising. They also contain anxiolytic properties to help reduce anxiety associated with dental procedures. The spray is for sublingual application, the gel is a topical application, and the rinse is a mouthwash that is antimicrobial and enhances wound healing.

StellaLife VEGA Oral Care products contain 16 active ingredients that are part of Homeopathic Pharmacopeia of the United States (HPUS). The products can be used after all dental surgical procedures, including bone and tissue grafting, extractions, implant placements, osseous surgery, biopsies, and dental nonsurgical procedures such as scaling and root planing, and quadrant dentistry.

StellaLife is a biotechnology company that formulates oral health and pain management products that improve dental patients' experience. VEGA Oral Care solutions are clinically proven to accelerate healing and reduce pain, bruising and swelling after surgical and non-surgical procedures. In addition, its solutions deliver exceptional long-term oral health care. For more information, visit www.stellalifehealing.com.

Bigger and better than ever

RPA Dental's range of products just keeps getting bigger and better. That's because the premium dental equipment distributor continues to work tirelessly in partnership with a number of quality manufacturers from around the world, adding new and innovative solutions to its catalogue all the time. Top of the range brands available from RPA Dental include Castellini, MyRay, Stern Weber and Tavom.

The first class distributor has even added a range of exquisite dental uniforms from leading Italian designer, Pastelli, to its directory.

RPA Dental's equipment sales team and Pastelli style consultants are contactable by both phone and email. Thus, if you have any questions, want a quote on a specific item or are simply looking to make an enquiry about refurbishing your practice, get in touch!
