

## Attend a three-day masterclass and achieve sparkling results

NSK proudly supports numerous educational courses across the UK and Ireland, including the Perio with Deepak events.

Perio with Deepak aims to equip professionals with the skills and knowledge required to offer patients the most effective periodontal therapy. These courses enable dental professionals to understand and manage periodontal conditions through a combination of prevention, maintenance and treatment methods.

The most popular course is the three-day Masterclass in Periodontal Disease Treatment and Management. Designed for dentists, dental therapists and hygienists, this course covers three phases:

- Non-surgical Periodontal Therapy – providing delegates with a

comprehensive knowledge of periodontal disease management using non-surgical periodontal therapy (NSPT) within a primary setting

- Treating and Maintaining Periodontal Disease – a hands-on day teaching planning and managing periodontal treatment after non-surgical procedures, focussing on ultrasonic scaling and air polishing

- Implementing Ideas and Profitable Periodontics – exploring the rationale behind evidence-based procedures, care pathways, better patient care and ethical selling of periodontal treatment.

During the course all delegates have the opportunity to use the latest NSK Varios 970 iPiezo ultrasonic scaler. With a range of over 70 tips, the Varios 970 is the ideal choice for perio, endo and scaling treatment or where minimal intervention is required.

The remaining events for 2017 include London on 18-20 August 2017 and Nuneaton on 15-17 September 2017.

For full course content, aims and objectives, start/finish times, venue details and so on, visit <http://www.periowithdeepak.com/courses/master-class/>.

## Safe cabinetry

Infection control concerning cabinetry continues to be a prevalent concern for dental practices – especially since bacteria are known to flourish between the joins and seams of a cabinet if given the chance. There is a solution that can help with this, however – Tavom cabinetry.

Available from RPA Dental, all ranges of Tavom cabinetry are specially designed with seamless joints and scratch-resistant worktops to minimise the spread of harmful bacteria.

They are also remarkably easy to clean with fantastic results, as well as impervious

to wear. Even the toughest of disinfectants will do no harm to the worktops and body of the cabinets, ensuring peace of mind day in, day out.

If you are looking for reliable, durable and safe cabinetry that you can trust to comply with infection control standards, then you can't go wrong with Tavom.

To find out more about the different ranges available – all of which can be customised to your exacting needs – get in touch with RPA Dental. Visit [www.rpadental.net](http://www.rpadental.net). For the London and Manchester Sales and Service Centres call 08000 933 975.

## Dental demin mapping

The dental profession is in desperate need of minimally invasive methods of caries management – which is precisely where the CALCIVIS imaging system comes in.

Designed to aid first line detection and communication, the CALCIVIS imaging system is an advanced technology that helps practitioners identify and manage dental caries before a restorative approach is even needed.

The CALCIVIS system does this by effectively imaging active demineralisation on the surface of a tooth during its earliest stages. This information, presented in the form of a 'demin map' gives dentists the chance to engage and commit patients to bespoke preventive treatments before irreversible damage is done to the teeth.

In this way, restorative or surgical solutions are made redundant, allowing practitioners to successfully conserve their patients' natural teeth.

Scheduled for a late 2017 launch, the CALCIVIS imaging system is set to revolutionise the way UK dental practitioners manage dental caries.

To find out more visit [www.calcivis.com](http://www.calcivis.com).
