

Is it time to digitally enable dentistry with the rest of healthcare?

On 26 July 2017, the Dental Leadership Clinical Fellows at Health Education England held the first ever Digitally Enabling Dentistry Conference to discuss the art of the possible of how to digitally integrate dentistry with the rest of healthcare. The conference highlighted how other areas of healthcare are collaborating to support the digital agenda set by the NHS Five Year Forward View and the Wachter Review.

The event highlighted how dentists should:

- Have shared access to Electronic Patient Records (EPR) with GPs
- Be able to view patient Summary Care Records (SCR)
- Electronically prescribe to pharmacies via the Electronic Prescribing Service (EPS)
- Have an intelligent dental Electronic Referral System (ERS).

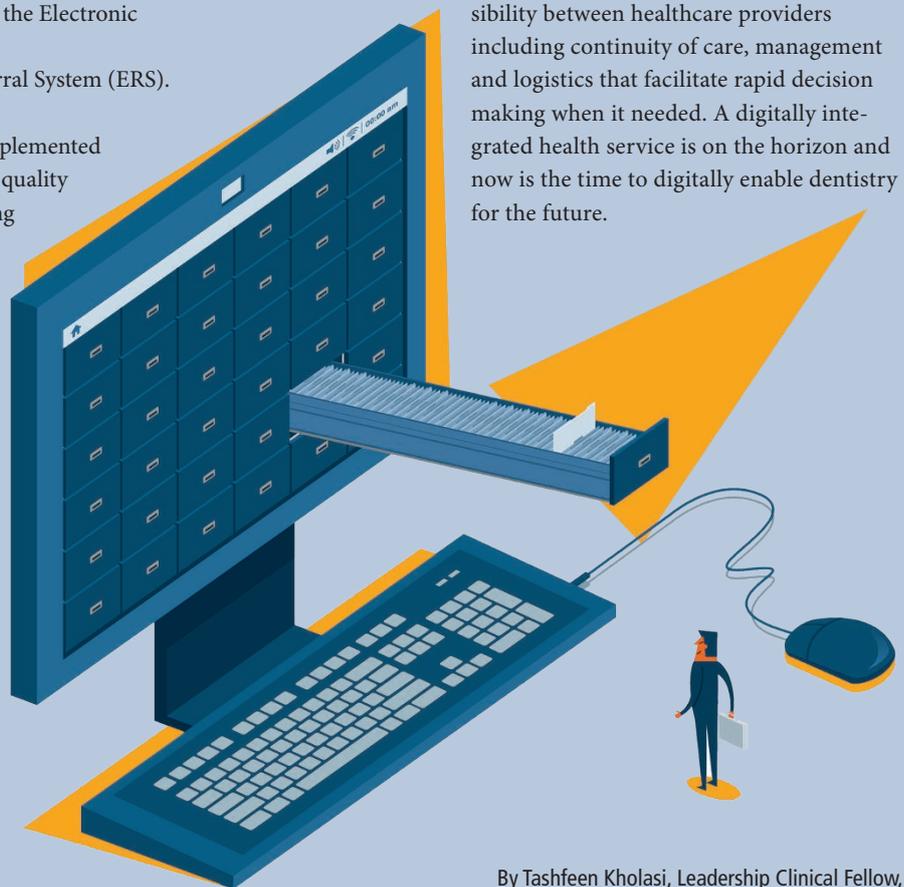

Pharmacy demonstrated how they have implemented SCR into community settings, improving the quality and safety of patient care, as well as integrating with GP practices to provide electronic prescribing (EPS). GP practices have data sharing agreements allowing seamless and secure sharing of patient records with neighbouring GP practices and services.

Camden CCG and South London & Maudsley NHS Trust (SLAM) proved the power of Interoperability of shared records. SLAM having implemented a cloud based EPR system allow their staff access to patient records from mobile devices regardless of the location and environment their patients are in. Neighbouring boroughs such as Lambeth and Southwark can also view these as part of the Local Care Record for South London. SLAM are in discussion with local dental hospitals to ensure that dentistry is included within this platform.

The challenges and barriers to digitisation were highlighted including addressing digital

literacy and collaboration as part of professional transformation. The event offered CPD in information governance, cybersecurity and the new general data protection regulation (GDPR) as part of the IG toolkit. The day concluded with innovative dentists and doctors demonstrating how apps and innovation can improve the patient and clinician experience.

The next step is to support our digital dental leaders in driving forward an integrated dental health service and tackle silo working which is further dividing dentistry from the rest of healthcare. The profession has mastered digitisation in their clinical ability, but the digital age ALSO means shared responsibility between healthcare providers including continuity of care, management and logistics that facilitate rapid decision making when it needed. A digitally integrated health service is on the horizon and now is the time to digitally enable dentistry for the future.

Stress and burnout research project

The British Dental Association (BDA) is conducting research looking into dentists' mental well-being. It will mainly focus on working conditions that can lead to stress and burnout in dentists and the impact this has on general well-being, health and patient care. All dentists are invited to take part in the online survey. All answers will be anonymous and confidential. To participate, please visit www.bda.org/burnout by 25 December 2017.

BDA AGM

The Central Counties Branch annual general meeting will take place on Monday 20 November 2017 at 19:00. The venue for the meeting is the Praza Restaurant, Hagley Rd, Birmingham, B16 8LU. The AGM will be preceded by a light buffet, with the meeting at 19:30. There will be a guest speaker, Laura Smart: 'Paediatric Trauma for GPs'. Please contact Tracey Broadley, 15 Garganey Court, Kidderminster, Worcestershire DY10 4UE or email Tracey.Broadley@sky.com with apologies or to request a booking form.
