

Lifting the bonnet on practice management software

Providing a thoroughly engaging experience for all visitors to the stand at Dental Showcase, Carestream Dental showed why it remains a leading provider of imaging technology and practice management software.

Demonstrating the complete workflow, a virtual experience awaited professionals looking to find out how seamlessly Carestream Dental technologies integrate.

Recreating the practice environment on-stand, delegates had an opportunity to perform some live scanning with the CS 3600 intraoral scanner for themselves. A huge thank you to A-dec for supplying the A-dec 400 dental chair for use on the stand!

The team also 'Lifted the bonnet' on the CS R4+ practice management software to demonstrate just how much it can do. For Denplan practices, the integration between

CS R4+ and DEPPA tools was of particular interest, with many time-saving and efficiency benefits now available.

With all this and more, delegates were really able to get stuck in and discover the full range of products and features available to them. If you missed Dental Showcase or would like to know more, contact Carestream Dental today on 0800 169 9692 or visit www.carestreamdental.co.uk.

Interproximal cleaner helps celebrate 25 year anniversary

At this year's BDIA Dental Showcase Philips Oral Healthcare was celebrating combining 25 years of Sonicare research with more than 100 years of innovation in health technology.

Philips has marked the 25th anniversary of Sonicare with the introduction of its best ever toothbrush, DiamondClean Smart, five clinical studies demonstrating the effectiveness of Sonicare, and the latest clinical evidence for Zoom whitening.

On the stand in Birmingham NEC, Philips also showcased a new version of the Sonicare AirFloss Pro, which is now available in black.

The AirFloss Pro has been shown to be as effective as string floss in preventing gingival inflammation; it cleans using micro-droplets of air and liquid that are jetted through a nozzle in single, double or triple bursts in order to remove interproximal plaque.

AirFloss Pro users can effectively clean the interproximal areas of the entire mouth in less than a minute. It is also easy to use with one-button functionality and a nozzle guidance tip. The battery lasts two weeks on a full charge and healthier gums can be attained in just two weeks.

Taking implants into the future

With more than 30 years' experience, TBR is a leader in the implant field, and at this year's BDIA Dental Showcase the team showcased their revolutionary Z1 implant.

This tissue level implant combines titanium and zirconia, whose biocompatibility allows for better clinical results. The unique zirconia collar helps improve soft tissue management and prevent peri-implantitis, while offering unmatched aesthetic results. And with a 98% success rate, it is no wonder delegates were wowed.

TBR's bone level implants were also featured, with platform switching for reduced inflammatory infiltration. They offer long-lasting aesthetics, bone stability and soft tissue preservation, with optimal primary stability in all bone densities.

Delegates could also find out more about the Baby-M and Baby 8 short implants. Using these can help avoid invasive surgery, such as sinus lifts, and lead to long-term aesthetic and functional success.

Some of the most advanced implant systems in the world, TBR's products are supplied exclusively through Dental Express (a trading division of Surgery Express LLP) in the UK. Why not get in touch to find out more, or visit the website for information on how TBR and the Z1 can help improve your practice.

Express for success

Dental Express were a hit at this year's BDIA Dental Showcase, where they displayed some of their eye-catching, high-quality products.

The team were on hand to answer delegates' questions about their exclusive products, such as the boldly colourful Vibrenté range, which combines practicality with style and includes a wide spectrum of products, from tray liners and face masks to nitrile gloves and disposable bibs. A starter pack is available for this range, giving practitioners a cost-effective chance to try some solutions in the colour of their choice.

Products designed to make dental professionals' lives easier were also showcased – such as the Ultra Multibrush, a touch-free dispenser system for applicator brushes; or the easy-grip no-mess BiteCheck.

Dental Express stayed true to their reputation of providing excellent customer service, with no query too large or too small. With a 100% money-back guarantee and next day delivery on all orders, Dental Express is your one-stop shop for consumables. Call today for more information.
