

FULLY COMPLIANT AUTOCLAVE

The DAC UNIVERSAL combination autoclave manufactured by Sirona fully complies with the HTM 01-05 regulations.

Automated cleaning and sterilisation of handpieces by combination autoclaves is considered to be superior to manual and semi-automated methods in terms of efficiency, economy and process reliability. The DAC UNIVERSAL simultaneously cleans, lubricates and sterilises up to six handpieces in one cycle after which the instruments are ready for use within 15 minutes. Alternatively, the instruments can be wrapped after cleaning and sterilisation and are then available for immediate use for up to 21 days. Cleaning and sterilisation can be carried out quickly which not only reduces the time spent by staff but also considerably reduces expenditure on handpieces. Moreover, the gentle cleaning and sterilisation process prevents damage to the instruments, thereby increasing their service life.

MAKE MIKE YOUR WEAPON OF CHOICE

Schülke, the dental surgery infection control product manufacturer, has launched a new online game to help raise awareness of surface infection control.

With the help of Schülke's mascot for surgery surface disinfection, 'Mike' Mikrozid, dental professionals are invited to try their hand at ridding their surgery of the infective invaders using products from the mikrozid range as their weapons of choice.

Using the arrow keys on the keyboard to move around the virtual surgery and the space bar to kill invading bugs, dental professionals of all ages are sure to enjoy this light hearted and educational game.

The mikrozid range from Schülke includes well known names such as mikrozid AF, mikrozid sensitive and terralin protect.

BEAUTIFULLY CRAFTED SMILE SOLUTIONS

Building on its portfolio of patient specific CAD/CAM restorative products, Biomet 3i is expanding the boundaries of a traditional dental implant company by providing a series of innovative digital solutions from which laboratories, clinicians and patients can benefit.

Renishaw is a leading manufacturer of in-lab dental scanning systems offering comprehensive digital solutions and supplies precision engineering products to sectors as diverse as aerospace and neurosurgery.

Biomet 3i and Renishaw offer: 3i *incise* Copings and Frameworks; Renishaw contact scanners; 3i *incise* CAD software and Renishaw in-lab milling machines.

Using the Renishaw scanner and 3i *incise* CAD software, labs can obtain broader access to a wide range of dental milling options, including the ability to scan precision copy milled bar patterns. Labs using the ProceraForte Scanner can also benefit from all of these options by using the 3i *incise* CAD software.
