

Faster biocompatible materials for long-term use

Formlabs, the designer and manufacturer of powerful and accessible 3D printing systems, has announced the release of Dental LT Clear, the first long-term biocompatible resin in desktop 3D printing for orthodontic applications for orthodontic devices. Formlabs also released improvements to its Dental SG Resin, reducing print speeds for surgical guides by up to 50%.

The fastest Formlabs material to-date, Dental LT Clear can be used to print splints and retainers in less than 50 minutes for a single unit. Full build platforms, with up to seven splints, can be completed in under two hours.

With the latest PreForm software update, Form 2 3D printer users can also benefit from speed improvements in Formlabs' Dental SG Resin. Single surgical guide prints will now be 50% faster, while full builds benefit from a 20% speed boost.

In addition to new product releases, Formlabs continues to build on its unabated growth via deepening partnership and distribution deals with 3Shape and Henry Schein, some of the largest players in the dental market.

Interested customers can request a free sample of Formlabs' Dental LT Clear or Dental SG material at: <https://formlabs.com/request-sample-part/>.

Elevate patients' oral health status

Committed to helping you improve and maintain your patients' oral health, TANDEX offers a range of proven solutions to suit the needs of each individual.

As professionals discovered at the BDIA Dental Showcase, FLEXI remains a leading product in the field. The high quality interdental brush features a robust design for maximum durability and its longer-than-usual filaments ensure food debris and plaque is comfortably and effectively removed from all interdental spaces.

Among other solutions on display was the PROXI interdental brush with a plastic head covering the metal tip for minimal trauma to the soft tissue. The PREVENT GEL also proved popular: developed especially for use with FLEXI or PROXI interdental brushes, it contains chlorhexidine plus 0.2% sodium fluoride and is non-abrasive for a gentle yet effective clean. Visitors to the stand also found out about the customer club, an exciting new project from TANDEX.

Discover more about how TANDEX could help your patients elevate their oral health status today. Visit www.tandex.dk.

Your solution to quick and precise impression-taking

It's all about choice, convenience and comfort with VOCO's family of *V-Posil* VPS impression materials. Recently enhanced by the introduction of *V-Posil Mono Fast*, the range now enables clinicians to easily select the most suitable impression material for every technique and speed.

When it comes to flexibility and versatility, this extensive collection offers clinicians the choice of four viscosities and can be used in one- or two-step putty-wash impression techniques. Additionally, the monophasic material *V-Posil Mono Fast* is ideal for taking impressions over fixed/removable restorations and implants.

The A-silicone-based material effectively combines high hydrophilicity for optimal wetting and high precision, whilst its exceptional toughness (up to 2.6 times) and elastic recovery (99.6%) ensures high-dimensional accuracy and safe, precise removal of the tray. Effectively combining optimal working time with short intra-oral setting times, clinicians can expect to maximise efficiency, reduce inaccuracy and increase patient comfort in as little as four minutes with the impressive *V-Posil* range.

Save up to 17% when you purchase the *V-Posil* Starter-Kit. To find out more, call the expert VOCO team today on the international Freephone number 00800 44 444 555 or email service@voco.de.

With age comes wisdom

Having remained dedicated to improving the oral health of the nation for the past 235 years, Wisdom Toothbrushes demonstrated its wealth of experience at the BDIA Dental Showcase.

Delegates were keen to discover its latest solutions, including the Wisdom Clean Between Rubber Interdental Brushes that are clinically proven to reduce gingival disease. The UK's No. 1 selling rubber interdental brushes, they are completely wire-free for enhanced patient comfort and they feature a tapered, flexible design that slides easily between the teeth for a gentle yet highly effective clean.

Available in three sizes and suitable for those with orthodontic appliances, crowns, bridges, periodontal problems and implants,

they are ideal for patients who have previously found wire interdental brushes difficult or uncomfortable to use.

Visitors to the stand also found out more about the new Proflex Interdental Brushes, featuring a flexible neck and curved handle for enhanced access to the back of the mouth and other difficult-to-reach areas. With reduced pressure on the wire for extended product life and a wire coating for improved patient experience, they are another fine example of the quality Wisdom has become known for.
