Recent studies clearly indicate that epigenetic changes influence immune cell development and function. However, the precise molecular and cellular mechanisms through which chromatin dynamics alter hematopoietic lineage choice, antigen receptor rearrangement and allelic exclusion, and immune responses to pathogens are not yet completely understood. By bringing together investigators exploring the epigenetic regulation of gene expression and its impact on diverse immunological biological processes, this Emergence & Convergence mini-symposium aims to foster interdisciplinary discussion, and to advance our understanding of the ways in which epigenetic factors exert such broad influence over the immune system.

The St. Anthony
San Antonio, TX, USA
February 19, 2010

SPEAKERS
Yehudit Bergman (The Hebrew University of Jerusalem, Israel)
Anne Corcoran (Babraham Institute, UK)
Katia Georgopoulos (Harvard University / Massachusetts General Hospital, USA)
Michael Krangel (Duke University, USA)
Matthias Merkenschlager (MRC Clinical Sciences Centre, UK)
Cornelis Murre (University of California, San Diego, USA)
Stephen Smale (University of California, Los Angeles, USA)
Alexander Tarakhovsky (The Rockefeller University, USA)
Keji Zhao (National Heart, Lung and Blood Institute, National Institutes of Health, USA)

ORGANIZERS:
Laurie Dempsey (Nature Immunology, USA)
Yves Christen (Fondation IPSEN, France)
Arianne Heinrichs (Nature Reviews Molecular Cell Biology, UK)
Jacqueline Mervaillie (Fondation IPSEN, France)

Attendance for up to 120 delegates is by application only. Successful applicants will be contacted in January and invited to register for the meeting, with instructions for online payment.

Application deadline: January 4, 2010

To apply and for more information visit: www.nature.com/natureconferences/eandc/epigimm
