

naturejobs PRESENTS A

SPOTLIGHT ON SOUTH INDIA

NATURE ISSUE DATE:
JULY 16, 2009

DEADLINE FOR ADVERTISERS:
JULY 10, 2009

Rich in scientific activity, South India stands out as a bright patch in the research and development map of the country. While Bangalore remains the scientific capital and Silicon Valley of India, Hyderabad can claim to have some of the most distinguished minds in physical sciences, particularly chemistry. Chennai, steeped in scientific legacy, is home to some of the historic scientific institutes of India. In recent years, the region has exhibited exciting capabilities in the research-driven industry — biotech, pharmaceutical and contract research.

A Spotlight in the July 16th issue of *Nature* captures the enormous growth in scientific stock of the South Indian region. The Spotlight on South India offers organizations in India a unique opportunity to advertise, recruit top tier talent and promote their events to the global scientific community. A strong association will be made between your organization and South India.

To take part in this unique opportunity, please contact your representative:
