Supplementary Figure 3. Independence of luminance and contrast gain control for two example cells. The plotting conventions are the same as in Fig. 6d of the paper.  

**a**, an Off-center, X-type cell. The descriptive model explains 85% of the variance in the responses of this cell, compared to 84% for the separable model.  

**b**, an On-center, Y-type cell. The descriptive model explains 57% of the variance in the responses of this cell, compared to 56% for the separable model.
