

Supplementary figure 2. Residual LPS in purified OPN does not affect clinical score of EAE. EAE was induced in 2D2 mice (5 per group) (a), SJL/J (5 per group) (b, c). Mice were treated with rOPN (5 µg) or LPS (0.5 ng) or PBS i.v. daily from day 0 (a and b) or from day 20 (after first remission). Arrows indicate the starting day of treatment. Data represent mean clinical score and s.e.m.
