

Supplementary Fig. 3. Bone marrow-derived mast cell (BMMC) morphology. Bone marrow cells from wild-type (WT), *Tnf*^{-/-}, *Il6*^{-/-}, and *Ifng*^{-/-} mice were differentiated in the presence of IL-3 and stem cell factor for 5 weeks (Wolters PJ et al. Clin Exp Allergy 2005;35:82-88). BMMC were then stained with toluidine blue. BMMC from all four types of mice show the similar granular morphology.
