

# Genetic Association between Dopamine Transporter Protein Alleles and Cocaine-Induced Paranoia

Joel Gelernter, M.D., Henry R. Kranzler, M.D., Sally L. Satel, M.D., and Peter A. Rao, M.D.

Due to a printer's error, the wrong figure appeared as Figure 2 on page 197 of the Gelernter et al. article published in *Neuropsychopharmacology* 11(3), pp. 195–200. The correct Figure 2 with its legend is presented here. Please place a photocopy of this page between pages 196 and 197 of your bound November 1994 issue as a correction.

**Figure 2.** Allele frequencies in our sample for white subjects according to presence or absence of cocaine-induced paranoia ( $n = 58$ ) ( $p = .047$  for allele 9).
