

indicates that the asymmetry of the absorption curve is an integral property of the visual purple. Bleached visual purple gave the same constant, showing that bleaching does not cause drastic splitting of the molecule. The molecular weight is probably about 270,000 and the molecule itself not quite spherical.

B. H. WILLIER, MARY E. RAWLES and F. C. KOCH: Biological differences in the action of synthetic male hormones on the differentiation of sex in the chick embryo. The hormones were injected into eggs incubated for 43–72 hours. Androsterone and dehydroandrosterone are more toxic than testosterone propionate; the former have both masculinizing and feminizing effects, whereas the latter has a masculinizing effect only on differentiating gonads and gonoducts.
