

## Erratum

# The alkyl-lysophospholipid, ET-18-OCH<sub>3</sub>, synergistically enhances the Merocyanine 540-mediated photoinactivation of leukemia cells: implications for the extracorporeal purging of autologous hematopoietic stem cells

T Yamazaki and F Sieber

*Bone Marrow Transplantation* 1997; **19**: 113–119

In the published copy of Figure 1 of the above paper, the structure of Merocyanine 540 lacked two double bonds, and in the structure of ET-18-OCH<sub>3</sub>, a -CH<sub>3</sub> was replaced by a -CH<sub>2</sub>. Also due to an error at our typesetters the subscripted numbers were replaced by full size numbers. A corrected version of the figure follows.

**Figure 1** Structures of MC540 and ET-18-OCH<sub>3</sub>.
