Bone Marrow Transplantation 2000; **26**: 893–897

Since publication of the above paper, a typesetting error has been identified.

The figure legend for Figure 1 should read ‘PCR amplification of the TCR- γ chain gene . . .’ and not ‘PCR amplification of the TRC- γ gene . . .’

Please see the corrected version below.

Figure 1 PCR amplification of the TCR- γ chain gene. In the γ III reaction (V β II + J β 1/2 with product size approximately 150–180 bp), the patient's specimen revealed a single sharp band about 180 bp, indicating the presence of TCR- γ chain gene rearrangement. S, patient; M, size marker; H₂O, negative control; NC, follicular lymphoma, negative control; PC, positive control.
