Errata

In the article "Evidence that Piroplasm can undergo Antigenic Variation" by R. S. Phillips (*Nature*, 231, 323; 1971), the key to the symbols in Fig. 1 should read: ●, Immunized; ▲, controls.

In the article "Solvophobic Interactions and Micelle Formation in Structure Forming Nonaqueous Solvents" by Ashoka Ray (*Nature*, 231, 313; 1971), the sentence beginning five lines beneath equation (1) on p. 313 should read: "Such ΔG_m values should therefore be taken as only approximate." Because of an editorial error, an unrevised version of Table 1 was published. The correct version appears here.

Notes to Authors

Will contributors to *Nature* follow as far as possible the general style of the journal, and in particular the following rules:

1. Manuscripts should be typed in double spacing and submitted in duplicate. Two copies of all figures should be included, one for the printers and one for the referee.

2. References are indicated by superscript numbers in the order in which they appear in the text, and have the following form:

¹ Sargent, W. L. W., and Searle, L., *Astrophys. J. Lett.*, **162**, L155 (1970).

² Fraenkel-Conrat, H., in *Comprehensive Biochemistry* (edit. by Florkin, M., and Stotz, E. H.), **7**, 75 (Elsevier, Amsterdam, 1963).

"Unpublished work", "Private communication" and "Work in preparation" should not be cited as references but may be incorporated in the text. Each reference number should refer to an individual work which has either been published or is in the press.

3. Although the text of longer articles is usually interrupted by headings at suitable intervals, these should be short and informative and not merely "Introduction", "Results", or "Conclusion".

4. Units should either conform to the SI system or be spelled out in full.

A fuller guide can be had from the *Nature* offices in London and Washington.
