CORRIGENDUM

Clinical significance of central nervous system involvement at diagnosis of pediatric acute myeloid leukaemia: a single institution's experience

BL Abbott *et al*

Leukemia (2004) 18, 187. doi:10.1038/sj.leu.2403232

Correction to: *Leukemia* (2003) 17, 2090–2096.
 doi:10.1038/sj.leu.2403131

It has been identified by the authors that Figure 2 in the above article contains an error. The correct figure is reproduced below:

Figure 2 Probability EFS of pediatric patients with AML according to CNS at diagnosis. CNS3 vs CNS1, $P=0.015$; CNS3 vs CNS2, $P=0.032$. The mean 5-year EFS estimate ($\pm$ s.e.) for each group was CNS1: $27.8 \pm 3.2\%$, CNS2: $24.3 \pm 7.5\%$, CNS3: $43.7 \pm 7.0\%$.
