## Nature Vol. 250 July 5 1974

THE unofficial Moscow seminar on "Collective Phenomena and the applications of physics to other fields of science", scheduled for July 1-5, 1974 now must pass into history as "the seminar that never was". With the arrest on Friday June 28 of Sinologist Vitali Rubin, it would seem that all leading members of the organising committee were in custody at the time of going to press. According to a cousin of Professor Mark Azbel, the arrested organisers are held outside Moscow, in detention centres which have previously been used for the temporary removal of dissidents from circulation. The centres mentioned are at Volokalansk and Serpukhov-the second showing a certain irony on the part of the authorities. Those intending participants not in custody are under virtual house arrest with police cars parked outside.

It is ten years since the June 1964 elections to the Soviet Academy of Sciences which marked the beginning Lysenkoism introduction of Mendelian genetics in from Vera Rich the Russians are usually eager to mark any for the development of agriculture, significant anniversary, this particular one is not liable to receive the usual acclamation of celebratory meetings and publications. Nevertheless, a recent on molecular biology and molecular decree of the Central Committee of genetics in our country is still insuffithe Communist Party of the USSR cient. There are only a few highly and the Council of Ministers of the qualified specialists making ready in USSR does, in oblique fashion, form this field. There are serious deficiencies a kind of epitaph to the Lysenko in the organisation of the production period, by indicating the harm done to of special scientific instruments and the development of Soviet science by high class apparatus, the necessary almost a quarter of a century of opt- range of chemical reagents, materials ing out of world trends in research in and biological preparations.' genetics and molecular biology.

sciences" have been made (it is not research and design for 1974-80. said by whom), which "have great

## Seminar that never was

On hearing of the arrests, Professor Edward Stern, one of the three international secretaries of the seminar. began an intensive campaign in Washington to effect the scientists' release. A delegation from the intending participants met Senators Jackson, Javits and Ribicoff, who undertook to send a telegram to Dr Kissinger, asking for their release. They also met Senator Hartke of Indiana who claims to be on good terms with Brezhnev, and who promises to intercede personally on their behalf. Acting Secretary of State Sisco also showed considerable interest in the plight of the scientists, and undertook to bring it to Dr Kissinger's

attention. Eleven Nobel Laureates endorsed the principle, which has been conveyed to Mr Nixon in Moscow, that the right of scientists to emigrate without harassment should be written into any bilateral agreement between the United States and USSR.

Meanwhile, it has been learned that Mrs Nina Voronel was informed on Saturday June 29 that the group will be released after the scheduled seminar dates have safely passed. What their subsequent fate will be remains uncertain. One of them, Corresponding-Academician Venyamin Levich, has, however, now been granted permission to emigrate "at the end of 1975", while his sons Venyamin and Aleksandr can leave at the end of this year. If this is an omen of events to come, the ill-fated Seminar will not have been convened in vain.

ficant-the new policy becomes effective immediately, without waiting, as would normally be expected, for the beginning of the next five-year plan in 1976. Since the logistics of implementing such mid-plan changes of policy in the framework of the rigid quinquennial budgeting of financial and manpower resources are considerable, it seems clear that what is involved is not only a change of planning policy, which could have waited another 18 months, but something close to panic measures.

The practical details contained in the Decree are sparse, as always. We learn, however, that a special Interdepartmental Scientific and Technical Council has been formed to coordinate research in this field, that means have been assured for the training of specialists, scientists and instructors, that new scientific research establishments and training colleges are to be opened and existing ones expanded, and also structed. The production of the repanded".

The Decree ends with the conventional expression of the confidence of the Central Committee and Council ganisations concerned will carry out pansion of Soviet science in the fields genetics. In this atmosphere of all ago, they saw fit to deprive of his
