

regions with class-specific amino-acid conservations. Among the latter, the class-specific neck regions adjacent to the core motor domains (amino acids 335–347 and 324–374 in ncd and kinesin, respectively) may be involved in conformational change amplification (see ref. 10). The findings that the N and the C termini are close to one another in space and near the 'switch II' helix are consistent with the idea that the neck regions may be important for directionality. Structural and functional studies of dimeric motor proteins are now in progress to test these ideas. □

ACKNOWLEDGEMENTS. We thank M. Matuska and N. Naber for preparation of 2'-I-ATP, V. J. Davison and M. Deras for providing 2-I-ATP; R. Wagner and S. Gillmor for assistance in data collection; R. Case for performing the sequence alignments; and D. Pierce for comments on the manuscript. This work was supported by an NIH program project grant. E.P.S. was supported by postdoctoral fellowship from the Leukemia Society of America.

CORRESPONDENCE and requests for material should be addressed to R.J.F. Coordinates referred to in this paper will be deposited in the Brookhaven Protein Database within a year of publication.

CORRECTIONS

Oligosaccharide ligands for NKR-P1 protein activate NK cells and cytotoxicity

Karel Bezouška, Chun-Ting Yuen, Jacqui O'Brien, Robert A. Childs, Wengang Chai, Alexander M. Lawson, Karel Drbal, Anna Fišerová, Miloslav Pospíšil & Ten Feizi

Nature **372**, 150–157 (1994)

We are re-evaluating the experimental system, originally set up in Prague (by K.B., A.F. and M.P.), used in this work. So far we have not been able to reproduce the effects on natural killing reported for NKR-P1 oligosaccharide ligands. The results of our re-evaluation will be published as soon as they become available.

Correspondence should be addressed to T.F. (e-mail: tfeizi@hgmp.mrc.ac.uk). □

Electrons in artificial atoms

R. C. Ashoori

Nature **379**, 413–419 (1996)

A TYPOGRAPHICAL error in equation (2) caused the \hbar terms to be incorrectly substituted by the Greek letter η . The equation should read

$$E_{n,l} = [\hbar\omega_c/2 + \hbar\sqrt{(\omega_c/2)^2 + \omega_0^2(2n + |l| + 1)}]$$
