

INDEX OF SUBJECTS

- ADH in chromosome substitution lines, 51-57
- age-structured populations, 291-297
- alien DNA in wheat, detection of by chromosome engineering, 439-455
- allelic mutant sites, recombination between, 405-425
- anthocyanidin synthesis, 127-132
- backcross and F_2 families, use of, for telocentric mapping in wheat, 59-66
- chemical carcinogens, action of, 329
- chiasma localisation and incomplete pairing, 385-396
- chiasmotype hypothesis, 305-308
- chromosome breakage, 153-157
- pairing and chiasma localisation, 385-396
- translocation, and DNA, 325
- crossing-over and chiasma formation, relation between, 305-308
- cyanogenesis in *lotus*, 189-206
- detection of alien DNA in wheat, 439-455
- differential predation, analysis of, 315-316
- DNA damage by chemical mutagens, 333
- interaction and chromosomal aberration, 334
- environment, sensitivity to, in *Nicotiana*, 363-369
- estimating gene numbers by genotype assay, 387-403
- evolution of isolation in clines, 371-384
- female mating preferences, 427-438
- sterility in *Drosophila*, 207-223
- fibrillar material in wheat microsporocytes, 326
- frog species, hybrid zone between, 13-25
- gene expression, mode of controlling, 335
- frequencies, analysis of, in frogs, 339-348
- genes, dwarfing in wheat, 67-70
- structural, in diploid species, stability of, 159-163
- genetic analysis of head mutation in *Drosophila*, 328
- of hordeins in barley, 463-466
- of settling behaviour, 1-12
- genetic change in neoplasia, 337
- distance in evolutionary phylads, 225-237
- linkage in pitch pine, 309-314
- genetic control of gene conversion in *Ascobolus*, 331
- immune response in mice, 327
- pigmentation, 127-132
- self incompatibility in *Gasteria*, 165-169
- in *Papaver*, 239-253
- genetic instabilities and transposable elements, 337
- studies in Duchenne muscular dystrophy, 325
- variation of Herpes simplex virus, 332
- genetical polymorphisms and starch gel electrophoresis, 41-42
- relationships in wheat, 133-151
- response to natural selection, 39-50
- variation for enzyme activity, 51-57
- genetics of coxal chaetae, 71-96
- genomic relationship of *Senecio Squalidus* and *S. Vulgaris*, 459-462
- genotype assay for estimating gene numbers, 387-403
- human trigeminal ganglion explants, 332
- hybrid zone between frog species, 13-25
- inbred lines, predicting recombinant, 349-361
- induced continuous variation, 255-268
- inheritance of polymorphic isoenzymes in pitch pine, 27-32
- intraspecific divergence in Australian frogs, 339-348
- linkage studies in mosquito, 457-458
- unambiguous test for, 171-173
- mapping of wheat dwarfing genes, 67-70
- mating behaviour, model of, 427-438
- megagametophyte analysis of genetic linkage, 309-314
- mitochondrial instability in *Saccharomyces*, 330
- mutagenesis by insertion of transposon 7, 328
- mutation in *aspergillus*, 330
- in *Coprinus*, 331
- in Eukaryotic microbes, 335
- mutation, induced in bacteria, 334
- in mouse spermatogonial stem cells, 336
- in the mouse, 326
- of drug resistant phenotypes in mammalian cells, 336
- research (review of), 177-187
- mutator effects of *E. coli*, 328-329

- nuclear DNA and number of structural genes, 159-163
- plasmid of *E. coli*, 329
- polymorphism in Ladybirds, 269-280
in pitchpine, 27-32
- power of the twin study, 97-116
- precursors and genetic control of pigmentation, 127-132
- predicting recombinant inbred lines, 349-361
- protoplast fusion in *streptomyces*, 330
- reactivity levels in relation to female sterility in *Drosophila*, 207-223
- relation of height and yield in wheat, 133-151
- reproductive isolation in clinical population, evolution of, 371-384
- segregation of flax genotroph isozymes, 281-290
- selection in varied environments, 39-50
- self-incompatibility in *Gasteria*, 165-169
in *Papaver*, 239-253
- sensitivity to environment, in *Nicotiana*, 363-369
- settling behaviour of a polychaete, 1-12
- sex-linked genes, 291-297
- site interaction in allelic recombination, 405-425
- sterility system in sibling species crosses in the mosquito, 327
- telocentric mapping in wheat, 59-66
- temporal control in Herpes simplex virus, 332
- test, unambiguous, for gene linkage, 171-173
- testing inbred lines, 117-125
- transcription, model of, 333
reactivation of, 331
in *Xenopus* nuclei, 331
- translocation heterozygosity in *viscum*, 33-38
- twins, use of in study of continuous variation, 97-116
- variation in gene action in *Drosophila*, 71-96
- variation in pure-breeding lines following selfing, 255-268
- white ivory, genetic nature of, in *Drosophila*, 299-303
- y-chromosome, effects of in mice, 326
