

## Erratum

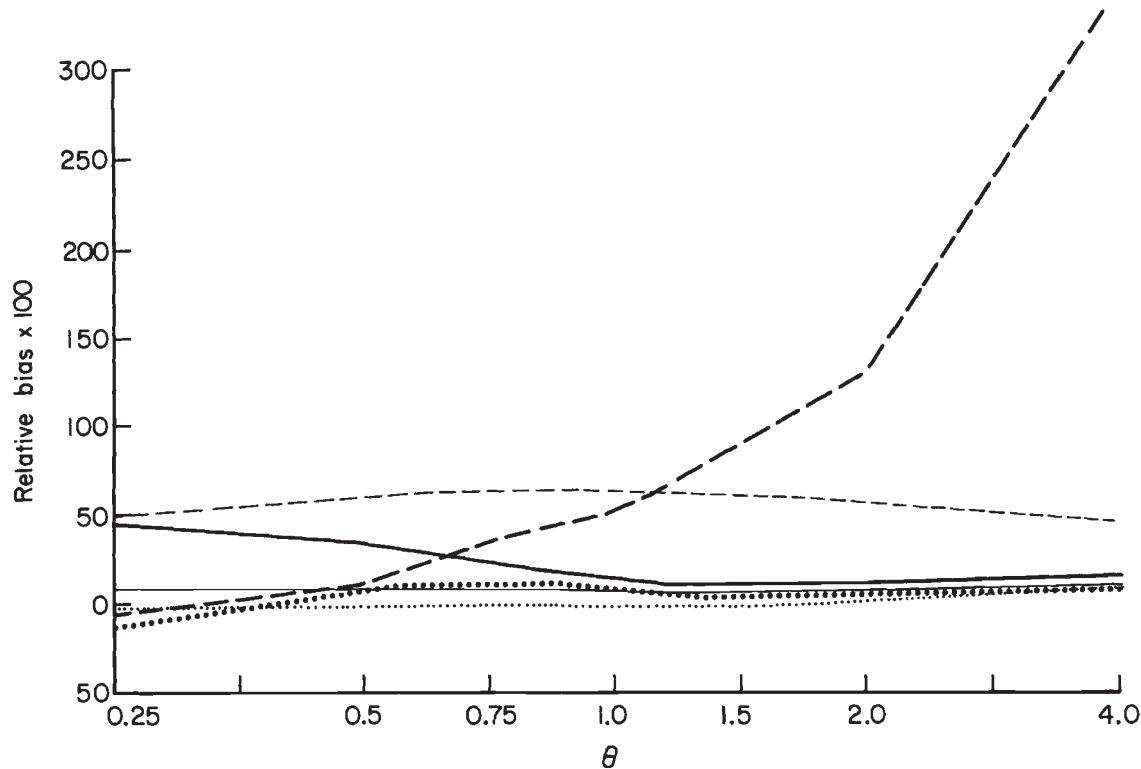

OCAÑA, J., RUIZ DE VILLA, C. & RIBÓ, G. (1991) Bias and efficiency in estimating sexual selection. Levene's Z index and some resampling alternatives. *Heredity*, **67**, 95–102.

Table 1 and Fig. 5 in this paper were incorrectly presented. The corrected versions are given below. No textual corrections are required in the paper since the text was based on the correct Table.

**Table 1** True value being estimated [ $s_1/s_2$  or  $\text{var}(Z_M)$ ], expectation of the estimator, mean square error (MSE) and rejection probability ( $P$ ) — inadequate tables for computing statistics, for the  $Z_M$  coefficient and Levene's estimate of variance  $\hat{\sigma}_L^2$

$Z_M$	$(\hat{\sigma}_L^2)$								
	$\theta$	$s_1/s_2$	$E(Z_M)$	MSE	$P$	$\text{var}(Z_M)$	$E(\hat{\sigma}_L^2)$	MSE	$\hat{\sigma}_L^2$

continued

**Fig. 5** Relative bias of  $\hat{\sigma}_L^2$  (---),  $\hat{\sigma}_J^2$  (—) and  $\hat{\sigma}_B^2$  (....). Ten mating experiments. Thin lines correspond to the 40:40 case and thick lines to the extreme 4:76 case.
